

THE PARTICLE THEORY

The particle theory describes the behaviour of matter. According to this theory, all matter is made up of tiny particles, which are constantly in motion. The behaviour of these particles is influenced by the temperature and pressure of their surroundings.

Fill in the blanks using the word bank provided. Next, draw a diagram to show how particles are arranged in a solid, liquid and gas.

WORD BANK

packed movement shape far vibrate slide closely
freely energetic contact electrical independently

SOLID

In a solid, the particles are tightly _____ together and _____ in place. They have a fixed _____ and volume because the particles are held closely together by strong forces of attraction. The particles can only move in a fixed position and cannot move past one another.

LIQUID

In a liquid, the particles are still close together but have more freedom of _____ than in a solid. They can _____ past one another, allowing liquids to take the shape of their container. However, they still have a fixed volume because the particles are still _____ packed.

Science Education in Theory and Practice Ben Akpan, Teresa J. Kennedy, 2020-09-08 This book provides a collection of applicable learning theories and their applications to science teaching. It presents a synthesis of historical theories while also providing practical implications for improvement of pedagogical practices aimed at advancing the field into the future. The theoretical viewpoints included in this volume span cognitive and social human development, address theories of learning and describe approaches to teaching and curriculum development. The book presents and discusses humanistic, behaviourist, cognitivist and constructivist theories. In addition, it looks at other theories such as multiple intelligences theory, systems thinking, gender sexuality theory and indigenous knowledge systems. Each chapter follows a reader motivated approach anchored on a narrative genre. The book serves as a guide for those aiming to create optional learning experiences to prepare the next generation STEM workforce. Review of Medical Dosimetry William Amestoy, 2015-03-03 This study guide will be a reliable support and easy to use source of information for students in the fields of dosimetry, physics, radiation oncology and therapy as they progress through the educational levels in preparation for board examinations. The theoretical and practical knowledge gained by students on previous courses or in clinical settings is reinforced by means of almost 1200 questions and accompanying detailed analytical answers. In order to cater for the needs of all students, the questions are arranged according to three levels of difficulty. The level 1 questions are mainly intended for those hoping to pass the Medical Dosimetrist Certification Board (MDCB) exam but will also be beneficial for Medical Physics candidates taking written exams and for Radiation Oncology residents. The level II questions are in general clinically related and will be relevant for any student while the level III questions are advanced and are especially suitable for American Board of Radiology candidates or

those taking equivalent exams elsewhere in the world The study guide is broken down into different subject areas with provision of multiple questions and answers on each subject In addition the mathematical and physics questions include brief explanations of how the student can solve each problem At the end of the guide three practice tests are included with the same number of questions as are found in the MDCB exam These tests will help students to test their knowledge and improve their test taking speed
