Eu Project Evaluation Guidelines:

Transport Project Evaluation Elvira Haezendonck, 2008-01-01 This timely book puts transport cost benefit analysis in a wider institutional perspective relating it in particular to decision making The book will be of interest to practitioners consultants and academics who are active in the evaluation of transport projects Erik T Verhoef VU University Amsterdam The Netherlands This is an important piece of work on project evaluation An attractive feature is the balanced treatment of theory and application The book provides very useful information on efforts of national governments in various countries to increase the quality of project evaluation studies by formulating guidelines for project evaluation One of the strong points of the book is that it does not only address technical aspects of project evaluation tools but also the institutional structures within which decisions are taken Piet Rietveld Vrije Universiteit and Tinbergen Institute Amsterdam The Netherlands This book revisits traditional evaluation methods such as cost benefit analysis to try and find a balance between the ever increasing demand for transport the search for sustainable mobility and green transport solutions and the limited financial resources that governments are able to invest in transport infrastructure projects In this respect the effects of transport policy need to be measured and evaluated based on multiple criteria and the need to take into consideration a larger group of stakeholders and investors in transport projects The book illustrates methodologically and empirically why and how the institutional and multi actor environment impacts upon the analysis evaluation and decision making of transport projects in Europe Including contributions from scholars with considerable expertise in the field this book will be of great interest to consultants policymakers and researchers *The Complete Reference Guide to United Nations Sales Publications, 1946-1978* Mary Eva Birchfield, 2019-05-20 No detailed description available for The Complete Reference Guide to United Nations Sales Publications 1946 1978 **A Directory of Impact Assessment Guidelines** International Institute for Environment and Development, 1998 *Project and Policy Evaluation in Transport* Liana Giorgi, Alan Pearman, Annuradha Tandon, Dimitrios Tsamboulas, 2017-11-22 This title was first published in 2002 There is a multitude of assessment methods available for analyzing and reporting on the impacts of policies all with different underlying assumptions and a wide range of criteria Since the 1950s much research has gone into creating guidelines for policy analysis yet only a small percentage of evaluation has been carried out on transport policy and none by political scientists or social policy specialists The editors of this volume recognize that European integration has seen a drive to bring policy evaluation on to the transport agenda and has increased demands for strategic assessments It has become apparent that to gain a fuller understanding of the success of a transport programme a much more complex combination of analytical methods must be used and a set of guidelines specifically for the field of transport must be developed This book achieves this by bringing together a multidisciplinary team of analysts from throughout the EU to discuss in a much broader way the various types of assessment methods and how they can best be used to evaluate transport programmes and systems both individually and in combination *European and*

International Experiences of Strategic Environmental Assessment Barry Sadler, Jiří Dusík, 2016-03-17 This book brings together the latest thinking in Strategic Environmental Assessment SEA and considers the key question of whether the processes are having a positive impact on strategic decision making both in Europe and worldwide As governments move to develop green agendas the book explores the challenges of working within national systems as well as the strengths and weaknesses of sector specific SEA The importance of stakeholder engagement is considered as is the question of how to turn NIMBYs into WIMBYs that is creating positive reasons to encourage development and allow local stakeholders to profit In assessing ways in which the practice of SEA can provide a new agenda for the 21st Century the chapters explore current and emerging approaches procedures and methods along with ways in which SEA can be linked with other planning tools The role of research and academia is considered and the book looks beyond the current status of SEA to address the question of how practitioners can capitalise on the potential of SEA to become integrated into high level policy as a key element of climate change mitigation strategies Each chapter is written by internationally renowned authors and based on many years of experience in the field The book will be essential reading for forward thinking practitioners and students of SEA
