Resources in Education ,1997 Community College Mathematics Brian Cafarella,2022-06-29 This book explores the rich history of community college math with a specific focus on gatekeeper math classes. Gatekeeper math classes include courses such as college algebra, introduction to statistics, and all developmental math classes. For community colleges, successful completion of these classes is imperative for student retention. This book presents a decade-by-decade analysis of the history of community college mathematics. The author employs a mix of conceptual, empirical, and quantitative research. The empirical research stems from interviews with 30 community college faculty members from seven community colleges. From the 1970s to the pandemic in the early 2020s, the book explores math curricula as well as trends, initiatives, teaching practices, and mandates that have impacted community college math. The positives and negatives of such trends, initiatives, and mandates are presented along with suggestions on how to apply such knowledge going forward. The author addresses the key questions: How can we build a future model for community college gatekeeper math classes that is both successful and sustainable? Additionally, how can we learn from the past and the present to build such a model? This book will be ideal for students in graduate programs focusing on community college leadership or developmental education leadership, as well as all those hoping to improve success rates in community college mathematics programs. **Quarterly Bulletin of the**

The sultanate's economy continues to enjoy the benefits of petroleum wealth which has provided budget surpluses in most years and served as a backbone for growth. However, planning is well under way for an era in which oil will not be the main economic driver with the twin goals of diversification and creating an increased number of private sector jobs at the top of the government's current agenda. Indeed, in recent years the non-OPEC oil exporter's economy has been undergoing a steady transformation, reorienting from oil toward a more diverse set of service and industry-based economic activities. So far, progress has been promising. In 2011, oil and gas accounted for 38.8% of GDP. With the continuation of higher than expected energy prices in 2012, the government has increased economic investments accordingly. These investments, which include infrastructure, social programmes, and small business development, are aimed toward better preparing the country for its post-fossil fuel future.
