

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- 1) Circles are females and squares are males.
- 2) A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of persons 1 - 15. Then answer the questions below the table.

What are the genotypes of the parents of II?

These parents (I) had a color blind son (II). His dad is normal, his color blind mom, from his mother. Since the mother is not shaded she must be a carrier.

Number II is color blind just like his father. Where could he get his allele for color blindness?

Yes, he must get his allele for color blindness from his mother. Must have been a carrier. If color blindness from their father.

Number numbers II and II were color blind. How did they have a color blind son (II)?

Both mothers carry the allele for color blindness.

What must be the genotype of the parents of a color blind daughter (II)?

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be $X^b Y$ and mother must have to be $X^B X^b$ or $X^b X^b$.

If number II has a normal son, what is the probability that their son will be color blind?

$X^B X^b \times X^B Y \rightarrow$ all of their sons will be normal with the color blind.
