On Site Diagnostics for Architectural Conservation and Restoration Alessia Bianco, 2017-06-13 The topic of on site diagnostics for historical monumental and vernacular architecture is characterized by a twofold difficulty partially due to a sort of hiatus between scientific community and professional system In fact on one side universities and research centres produce advanced technologies methodologies and procedures but not always adequately disseminated among professionals and sometimes inconsistent with some relevant criteria such as feasibility and cost effectiveness On the other side professionals in the field of on site diagnostics for historical architectures are holder of a heritage made of experiences and practice which often is not enough shared and sometimes is contrasting with the limited possibility to evaluate and verify the professional training and certification system which seems too heterogeneous if compared to other high scientific and technical professions as is the case for example of medicine or engineering In this book the diagnostic experiences are described though for logistical reasons often briefly following a systematic methodological approach according to three of the main steps for the knowledge of historical buildings anamnesis diagnosis and prognosis obviously with particular attention to the specifically diagnostic issues diagnosis but framed in the preliminary diagnostic plan and interpreted in the light of the performance prefigured in the preliminary stages and connected to the visual inspection That is why this book regards not only some experimental unconventional and innovative diagnostic surveys and diagnostic experiences carried out on particularly valuable monumental buildings under the historical architectural point of view but also ordinary and simple experiences in the field of professional diagnostic practice where however it was possible to apply the methodology and the know how acquired and systematized in the performance of the experimental diagnostic surveys often included in wider scientific research projects This book is not exclusively addressing the scientific and academic community but it also pursues the aim of disseminating in the professional system a heritage of rather varied experimental researches and practical experiences but methodologically oriented toward a culture which considers the design of diagnostic plans as a regulation criterion for quality control of professionals

thought out projects designed for grades 3-5. In assigning your students projects that dig into West Virginia's geography, history, government, economy, current events, and famous people, you will deepen their appreciation and understanding of West Virginia while simultaneously improving their analytical skills and ability to recognize patterns and big picture themes. Project-based learning today is much different than the craft-heavy classroom activities popular in the past. Inquiry, planning, research, collaboration, and analysis are key components of project-based learning activities today. However, that doesn't mean creativity, individual expression, and fun are out. They definitely aren't. Each project is designed to help students gain important knowledge and skills that are derived from standards and key concepts at the heart of academic subject areas. Students are asked to analyze and solve problems, to gather and interpret data to develop and evaluate solutions to support their answers with evidence, to think critically in a sustained way, and to use their newfound knowledge to formulate new questions worthy of exploring. While some projects are more complex and take longer than others, they all are set up in the same structure. Each begins with the central project, driving questions, proceeds through research and supportive questions, has the student choose a presentation option, and ends with a broader view inquiry. Rubrics for reflection and assessments are included too. This consistent framework will make it easier for you to assign projects and for your students to follow along and consistently meet expectations. Encourage your students to take charge of their projects as much as possible. As a teacher, you can act as a facilitator and guide. The projects are structured such that students can often work through the process on their own or through cooperation with their classmates.
