Parental Questionnaires as a Reliable Instrument for the Assessment of Child Language Development

Maria-José Ezeizabarrena, Melita Kovacevic, 2024-09-13 Language is crucial in child development Therefore general questions such as what are the possible challenges in language acquisition or such as how well the my child is doing are commonly present for researchers clinicians teachers and parents Parent child interaction offers a privileged setting to observe children s behavior in multiple communicative situations which often is only available to the parents caregivers For this reason within the broad range of methods used to assess children s development parental questionnaires are widely used being a non invasive and inexpensive instrument to obtain information which is otherwise difficult to obtain Data obtained with the many questionnaires covering various aspects of child development and communicative competence are equally relevant for basic research and everyday clinical practice Development and use of parental questionnaires as well as data interpretation

Calculating Confidence Intervals for Continuous and Discontinuous Functions of Estimated Parameters John C. Ham,Tiemen Woutersen,2011 The delta method is commonly used to calculate confidence intervals of functions of estimated parameters that are differentiable with non zero bounded derivatives When the delta method is inappropriate researchers usually first use a bootstrap procedure where they i repeatedly take a draw from the asymptotic distribution of the parameter values and ii calculate the function value for this draw They then trim the bottom and top of the distribution of function values to obtain their confidence interval This note first provides several examples where this procedure and or delta method fail to provide an appropriate confidence interval It next presents a method that is appropriate for constructing confidence intervals for functions that are discontinuous or are continuous but have zero or unbounded derivatives In particular the coverage probabilities for our method converge uniformly to their nominal values which is not necessarily true for the other methods discussed above **Tests and Confidence Intervals Based on the Metric Db2s** J.
