Analysis and Design of Communication Techniques in Spectrally Efficient Wireless Relaying Systems Jian Zhao,2010 This dissertation studies the communication technologies in relaying systems with multiple antennas especially in the multiple input multiple output MIMO two way relaying systems Both information theoretic aspects and practical communication strategies are considered and analyzed For the information theoretic analysis an analytical framework for the coverage of MIMO relaying systems based on an outage capacity criterion is proposed For MIMO two way relaying systems different data combining schemes at the relay are compared based on their achievable rates In addition optimal time division TD strategies for MIMO two way decode and forward DF relaying systems are proposed and analyzed When the optimal TD strategies are applied the increase of the achievable rate regions in the system is significant compared to those using the equal TD strategy For the practical transmission schemes we propose the self interference SI aided channel estimation and data detection schemes for the broadcast phase of two way DF relaying systems Such schemes exploit the SI in two way DF relaying systems when the superposition coding SPC scheme is applied When the network coding scheme is applied in two way DF relaying systems we propose an asymmetric data rate transmission scheme that utilizes the known data bits at the receivers Such a scheme exploits the a priori known bits at the weak link receiver in the broadcast phase of two way relaying systems   *Machine Learning, Animated* Mark Liu,2023-10-31 The release of ChatGPT has kicked off an arms race in Machine Learning ML however ML has also been described as a black box and very hard to understand Machine Learning Animated eases you into basic ML concepts and summarizes the learning process in three words initialize adjust and repeat This is illustrated step by step with animation to show how machines learn from initial parameter values to adjusting each
