MOP Connection: Refraction and Lenses: sublevels 1 and 2

- Write a one-word synonym for **refraction**. _____
- Refraction occurs when light crosses the boundary between one material and another material. What is the primary cause for this refracting of light upon crossing a boundary?

The diagram below shows the path of a light ray as it travels through air, across the air-water boundary, and through the water. Use the diagram to answer questions #3-#6.

- On the diagram, label ____
 - the air-water boundary with a **B**
 - the normal line with an **N**
 - the incident ray with an **I**
 - the refracted ray with an **R**
 - the angle of incidence with a θ_i
 - the angle of refraction with a θ_r
- How many media are there in this diagram? ____
Name them.

- What is meant by the term "medium" in this context?
- Place a noticeable dot at the location where refraction of light takes place.
- For the three situations below, draw a normal line and measure and record the angles of incidence and the angles of refraction.

$\theta_i =$ _____

$\theta_r =$ _____

$\theta_i =$ _____

$\theta_r =$ _____

$\theta_i =$ _____

$\theta_r =$ _____

- As light passes from one medium into another, it refracts. There is only one condition in which light will cross a boundary but not refract. State this condition.

Wallace,W. Loudon,2005-12-11 Teachers Learning Stories of Science Education is aimed at science educators who wish for a deeper understanding of how teachers learn to teach science and the role of stories in reporting science education research It is a fascinating look at the knowledge teachers have and use how context influences teachers work and the role of reflection and collaboration in teachers learning At the core of each chapter is a story or group of stories written by or about teachers These stories serve as a form of data to build a set of arguments about how science teachers grow and the possibilities for change in teaching This book is designed for all those involved in the science teaching enterprise Pre service teachers graduate students and science education researchers are invited to utilise both the findings about teachers learning and the research processes employed to develop those findings *Cscl* Timothy Koschmann,2012-10-12 This book about a newly emerging area of research in instructional technology has as its title the acronym CSCL Initially CSCL was chosen as an acronym for Computer Supported Collaborative Learning However some would argue that collaborative is often not a descriptive term for what learners do in instructional settings further as

the field develops the technology used to support collaboration may not always involve computers at least not in the direct ways they have been used to support instruction in the past To avoid getting bogged down in this terminological debate this book uses CSCL as a designation in its own right leaving open to interpretation precisely what words it stands for The authors talk a great deal about the theory underlying their work In part this is because that is what they were asked to do but it is also an indication of the state of the field In an established paradigm in which the theories and methods are well agreed upon such discussion is less central CSCL however has not yet reached the stage of normal science There is much to be worked out yet This book is offered with the hope that it will help to define a direction for future work in this field The chapters appear in alphabetical order except for the introductory chapter and the afterword not for lack of a better way to organize the chapters but rather because the organizational possibilities are too numerous and this order does not privilege one over another By not imposing a topical organizing structure on this collection it is hoped that readers will feel freer to explore the chapters in a way that best suits their needs
