**Design of Visualizations for Human-Information Interaction** Kamran Sedig, Paul Parsons, 2022-05-31 Interest in visualization design has increased in recent years While there is a large body of existing work from which visualization designers can draw much of the past research has focused on developing new tools and techniques that are aimed at specific contexts Less focus has been placed on developing holistic frameworks models and theories that can guide visualization design at a general level a level that transcends domains data types users and other contextual factors In addition little emphasis has been placed on the thinking processes of designers including the concepts that designers use while they are engaged in a visualization design activity In this book we present a general holistic framework that is intended to support visualization design for human information interaction The framework is composed of a number of conceptual elements that can aid in design thinking The core of the framework is a pattern language consisting of a set of 14 basic abstract patterns and a simple syntax for describing how the patterns are blended We also present a design process made up of four main stages for creating static or interactive visualizations The 4 stage design process places the patterns at the core of designers thinking and employs a number of conceptual tools that help designers think systematically about creating visualizations based on the information they intend to represent Although the framework can be used to design static visualizations for simple tasks its real utility can be found when designing visualizations with interactive possibilities in mind in other words designing to support a human information interactive discourse This is especially true in contexts where interactive visualizations need to support complex tasks and activities involving large and complex information spaces The framework is intended to be general and can thus be used to design visualizations for diverse domains users information spaces and tasks in different fields such as business intelligence health and medical informatics digital libraries journalism education scientific discovery and others Drawing from research in multiple disciplines we introduce novel concepts and terms that can positively contribute to visualization design practice and education and will hopefully stimulate further research in this area *Bank Job* Hilary Powell, Daniel Edelstyn, 2020-09-30 Art hacks life when two filmmakers launch a project to cancel more than 1m of high interest debt from their local community Bank Job is a white knuckle ride into the dark heart of our financial system in which filmmaker and artist duo Hilary Powell and Dan Edelstyn risk their sanity to buy up and abolish debt by printing their own money in a disused bank in Walthamstow London Tired of struggling in an economic system that leaves creative people on the fringes the duo weave a different story both risky and empowering of self education and mutual action Behind the opaque language and defunct diagrams they find a system flawed by design but ripe for hacking This is the inspiring story of how they listen and act upon the widespread desire to change the system to meet the needs of many and not just the few And for those among us brave enough they show how we can do this too in our own communities one bank job at a time **Graft** Matt Hill, 2016-02-02 Manchester 2025 Local mechanic Sol steals old vehicles to meet the demand for spares But when Sol s
