 electronics experience but does assume that students have had calculus 1 single variable differential calculus and high
 school physics A key idea of the course is that students need a lot of design experience and hands on work rather than a lot of
 theory The course is centered around the labs which are a mix of design labs and measurement modeling labs This unique
 volume takes students from knowing no electronics to being able to design and build amplifier and filter circuits for
 connecting sensors to microcontrollers within 20 weeks Students design a digital thermometer a blood pressure meter an
 optical pulse monitor an EKG an audio preamplifier and a class D power amplifier They also learn how to measure and
 characterize components including impedance spectroscopy of a loudspeaker and of electrochemical electrodes Related Link
