A. Results

- After examining your TSA and blood agar plates, record your results in the following table. With respect to the plates, we are concerned with a quantitative evaluation of the degree of contamination. Quantify the growth on the plates as follows:

0	no growth		
+	1 to 10 colonies		
++	11 to 50 colonies	+++	51 to 100 colonies
++++	more than 500 colonies	++++	100 to 500 colonies
- After shaking the tube of broth to disperse the organisms, look for cloudiness (turbidity). If the broth is clear, no bacterial growth occurred. Record no growth as 0. If the tube is turbid, record + in the growth column.
