Library Technology Planning for Today and Tomorrow Diana Silveira, 2018-10-15 Technology is a crucial part of libraries today. But when it comes to figuring out the most effective technologies for their library or to planning for future technology needs, many librarians don't know where to begin. *Library Technology Planning for Today and Tomorrow* is the place to start. This practical guide will be of special value to those in small and medium size libraries, especially those new to the planning process who have not previously implemented technology or who have had difficulty implementing strategic plans. By using this LITA guide, overwhelmed librarians can create a sound, realistic technology plan and implementing that plan by identifying each step necessary to accomplish the library's goals. As they follow this road map from beginning to end, library staff will be able to meet the technology needs of their communities and to achieve their library's technology goals. This step-by-step guide takes the reader through the process of successfully creating and implementing a library technology plan. Each chapter addresses an aspect of planning and implementation: from conducting a technology audit and selecting appropriate devices to deploying new technologies and training staff and users. Further, this LITA guide will help librarians evaluate the success of their work in developing and implementing their technology plans. **Introduction to Software**

RAND SLAM Program Jacob Alex Klerman,2008 Assessing alternative mixes of active and reserve forces is a crucial defense issue Force structure decisions are made in an inherently uncertain environment Force requirements can vary unpredictably sometimes surging dramatically depending on the types of conflicts that arise The RAND SLAM program is a software application designed to aid military analysts in exploring the inherent trade offs between cost stress and risk in force structure decisions Its unique feature is that it models force requirements stochastically allowing for analysis of requirements that change unpredictably over time This report serves as a user s guide explaining the program s features and interface and guiding the user through example analyses Several of these example analyses examine some of the same force structure decisions as those analyzed with spreadsheet techniques by Lynn E Davis et al in Stretched Thin Army Forces for

Sustained Operations thus validating the RAND SLAM results against this previous work The authors also discuss the underlying model for the program including its strengths and limitations and how it might be expanded and improved
