examines what ownership means in legal terms across multiple legal systems and explains why singling out ownership as being pivotal to state and personal accountability is a strategy both flawed and disingenuous. It is argued that an apparent lack of political will coupled with shape shifting definitions of ownership have resulted in tokenism. Particular attention is paid to those orphan structures which have evolved from standard models or which have been designed for the purpose in each case of facilitating ownership concealment and avoidance. The author explains how the virtual world of the blockchain crypto assets and cryptocurrency and virtual entities such as the Decentralised Autonomous Organisations (DAOs) all of which elude legal classification have opened a new world of possibilities. Applicable across all jurisdictions and legal systems the book will be a valuable resource for academics, researchers and policy makers working in the areas of financial crime, regulation, compliance, business and accountancy.
