Food The Key Concepts:

Food Warren Belasco, 2008-10-15 *Food The Key Concepts* presents an exciting coherent and interdisciplinary introduction to food studies for the beginning reader. Food Studies is an increasingly complex field drawing on disciplines as diverse as Sociology, Anthropology, and Cultural Studies at one end and Economics, Politics, and Agricultural Science at the other. In order to clarify the issues, *Food The Key Concepts* distills food choices down to three competing considerations: consumer identity, matters of convenience and price, and an awareness of the consequences of what is consumed. The book concludes with an examination of two very different future scenarios for feeding the world's population: the technological fix which looks to science to provide the solution to our future food needs, and the anthropological fix which hopes to change our expectations and behaviors. Throughout the analysis is illustrated with lively case studies. Bulleted chapter summaries, questions, and guides to further reading are also provided. P 4 of cover

Food Safety Culture Frank Yiannas,2008-12-10 Food safety awareness is at an all time high new and emerging threats to the food supply are being recognized and consumers are eating more and more meals prepared outside of the home Accordingly retail and foodservice establishments as well as food producers at all levels of the food production chain have a growing responsibility to ensure that proper food safety and sanitation practices are followed thereby safeguarding the health of their guests and customers Achieving food safety success in this changing environment requires going beyond traditional training testing and inspectional approaches to managing risks It requires a better understanding of organizational culture and the human dimensions of food safety To improve the food safety performance of a retail or foodservice establishment an organization with thousands of employees or a local community you must change the way people do things You must change

their behavior In fact simply put food safety equals behavior When viewed from these lenses one of the most common contributing causes of food borne disease is unsafe behavior such as improper hand washing cross contamination or undercooking food Thus to improve food safety we need to better integrate food science with behavioral science and use a systems based approach to managing food safety risk The importance of organizational culture human behavior and systems thinking is well documented in the occupational safety and health fields However significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety
