R. Adams, M. O. Moss, 2008 This is the third edition of a widely acclaimed text covering the whole field of modern food microbiology **Modern Food Microbiology** James M.

Jay, 2012-12-06 This fifth edition of Modern Food Microbiology places special emphasis on foodborne microorganisms as the previous four editions attempted to do A good understanding of the basic biology of foodborne organisms is more critical for food scientists now than in previous decades With so many microbiologists in the 1990s devoting their attention to genes and molecules one objective of this text is to provide a work that places emphasis on entire microbial cells as well as their genes and molecules For textbook usage this edition is best suited for a second or subsequent course in microbiology Although organic chemistry is a desirable prerequisite those with a good grasp of general biology and chemistry should not find this book difficult In addition to its use as a course text this edition like the previous contains material that goes beyond what normally is covered in a one term course For use as a food microbiology text suggested starting points are the sections in Chapter 2 that deal with the sources and types of microorganisms in foods followed by the principles outlined in Chapter 3 The food product chapters Chaps 4 9 may be covered to the extent that one wishes but the principles from Chapters 2 and 3 should be stressed during this coverage A somewhat logical next step would be food preservation methods as outlined in Chapters 13 17 where again the principles from Chapter 3 come into play **Elementary Food Science** Richard

Owusu-Apenten, Ernest R. Vieira, 2022-05-28 Following the success of the popular introductory text Elementary Food Science 5th edition covers a broad range of food science topics organized in four parts Part 1 Interrelated food science topics Part 2 Food safety GMP is described independently and as a prerequisite for HACCP VACCP and TACCP food safety management systems Part 3 contains two new chapters dealing with basic aspects of food processing and the quality of dried foods Part 4 covers handling and processing major food commodity groups meat dairy products poultry and eggs fish and shellfish cereal grains bakery products fruits and vegetables sugar confectionery A new final chapter covers the foodservice industry The text highlights food science links with industry uniquely using the North American Industry Classification System NAICS Overall the book is thoroughly modernized with over 1500 references cited in recognition of thousands of named food scientists and other professionals The target readership remain unchanged for the current edition i.e. Students of food science from senior

high school colleges or universities Sections of the book will also appeal to advanced readers from other disciplines with perhaps little or no prior food science experience Additionally readers covering the intersection of food science with culinary arts food services and nutrition or public health will find the book useful
