

Part 1

1. When a horse pulls a wagon, the force that causes the horse to move forward is
- (a) the force he exerts on the ground.
 - (b) the force he exerts on the wagon.
 - (c) the force the ground exerts on him.
 - (d) the force the wagon exerts on him.

Answer (c): This is the only force acting on him in the forward direction.

2. A coin is tossed vertically up in the air. It first rises and then falls. As the coin passes through its highest point the net force on it
- (a) becomes zero.
 - (b) acts downwards and reaches a maximum value.
 - (c) acts downwards and reaches a minimum value.
 - (d) acts downwards and remains constant.

Answer (d): The force due to gravity acts downwards and is constant.

3. A helicopter flies horizontally with constant velocity. The net force acting on it is
- (a) parallel to the velocity.
 - (b) vertically upward.
 - (c) vertically downward.
 - (d) zero.

Answer (d): Velocity is constant so the net force is zero by Newton's 1st Law

4. A constant force is exerted on a cart that is initially at rest on a track. Friction between the cart and the track is negligible. The force acts for a short time interval and gives the cart a certain final speed. To reach the same final speed with a force that is only half as big, the force must be exerted on the cart for a time interval
- (a) four times as long as for the stronger force
 - (b) twice as long as for the stronger force
 - (c) half as long as for the stronger force
 - (d) a quarter as long as for the stronger force

Answer (b): If the force is half as big but the mass is the same then the acceleration is half as big so it takes twice as long to reach the same velocity.

Student Study Guide & Selected Solutions Manual David D. Reid, 2007 **Science And Humanity: The Extraordinary Life Of Joseph H Hamilton** Da-hsuan Feng, Mark A Riley, Leo L Riedinger, William H Brantley, 2025-02-18

Joseph H Hamilton is a world leading nuclear physicist and the Landon C Garland Distinguished Professor of Physics at Vanderbilt University. He retired in 2022 after 64 years on the faculty and a career of major contributions in research, education, formation of collaborations, and construction of new facilities. His influence on the field of nuclear physics has been enormous, and his mentorship of new talent profound. Starting from early life in a depression era small town, he built a long and highly successful career in science and even in the interface between science and religion with extensive writings and lectures. Some of Hamilton's colleagues have summarized in this book his major scientific discoveries, his development of new physics consortia and facilities, teaching of undergraduates, mentorship of graduate students and postdoctoral fellows, and devotion to building collaborations across the US, Europe, and Asia. He has published over a thousand scientific papers and is known for seminal contributions in a variety of important areas in nuclear science. One major discovery has been the co-existence of very different shapes in a single nucleus, once thought impossible, and which has led to significant new insights into the fascinating quantum world of the atomic nucleus. Another was the discovery of element 117 as he led the formation of the consortium to perform these difficult measurements and then suggested the name adopted for this new element, Tennessine. This book includes his own summary on a remarkable career and the heartfelt comments of people that have so greatly benefited from his work and partnership. All together, these chapters will show future generations what it means and what is needed to become a great scientist as well as an incredible human being. Exercises in arithmetic.
