Reviewing previous lesson or presenting the new lesson	Exit (The activities in this section will occur as time allows, mostly on prior experience from the students) The teacher will recall the prerequisite concept on electricity and magnetism before he proceeds to next lesson (Electric Motor) these concepts are: • A conducting wire produce magnetic field when electrical current flow within the wire. • The magnetic field of a current carrying conductor perpendicularly surround in the wire if there is electron flow. • The direction of the current and magnetic field follows the right-hand rule. • The right-hand rule can be used to understand the magnetic field in the current carrying conductor where curl your finger into a half-circle around the wire, they point in the direction of the magnetic field and thumbs points in the direction of the conventional current. • Electromagnetic induction is the production of an electromotive force (emf) in a conductor as a result of a changing magnetic field about the conductor. • Electromagnetic induction can take place when there is a relative motion of a wire and the magnetic field. Method to change magnetic field: a. By moving a magnet towards or away from the coil b. By moving the coil into or out of the magnetic field c. By changing the area of a coil/placement in the magnetic field d. By rotating the coil relative to the magnet. • The motion of electron in the conductor is a result of the applied force by the magnetic
