Power Systems Analysis Illustrated with MATLAB and ETAP Hemchandra Madhusudan Shertukde, 2019-01-15

Electrical power is harnessed using several energy sources including coal hydel nuclear solar and wind. Generated power is needed to be transferred over long distances to support load requirements of customers viz residential industrial and commercial. This necessitates proper design and analysis of power systems to efficiently control the power flow from one point to the other without delay disturbance or interference. Ideal for utility and power system design professionals and students, this book is richly illustrated with MATLAB and Electrical Transient Analysis Program ETAP to succinctly illustrate concepts throughout and includes examples, case studies, and problems. Features illustrated throughout with MATLAB and ETAP: Proper use of positive negative zero sequence analysis of a given one line diagram (OLD) associated with a grid as well as finger holding instructions to tackle a power system analysis (PSA) problem for a given OLD of a grid. On line evaluation of power flow, short circuit analysis, and related PSA for a given OLD. Appropriately learn the finer nuances of designing the several components of a PSA including transmission lines, transformers, generators, motors, and illustrate the corresponding equivalent circuit. Case studies from utilities and independent system operators.
