

Genetic Patterns in Tribbles – Practice Homework

Many traits, such as the coats of mammals are produced by the interaction of many genes. In this problem, you will demonstrate understanding of genetics of a fictional animal called Tribbles, made famous on Star Trek several years ago. While some Tribbles reproduce asexually, Federation Scientists are exploring a remote planet with a population of Tribbles that produce sexually and demonstrate some interesting patterns and bright colors. You have been called in to help determine the genetic patterns in Tribble crosses and boldly go where no one has gone before.

You make the following observations:

- a) A cross between a purebred lime green Tribble and a purebred red Tribble produces offspring that are all red.
- b) A cross between a long haired Tribble and a short haired Tribble produces fuzzy, (medium length hair), offspring.
- c) Occasionally an unusual plaid coated Tribble is born. The plaid offspring are almost always male, and in most cases, neither parent is plaid. A plaid male rarely has a plaid male son, but the father must be plaid for the female offspring to be plaid.
- d) Tribbles with whiskers can have long whiskers, short whiskers, a mix of long and short whiskers or no whiskers at all.

1. From the list above determine which trait represents (you will use one letter more than once) –

_____ dominant(expressed)/recessive(not-expressed) pattern,

_____ co-dominance(expression) pattern

_____ incomplete dominance(expression) pattern

_____ multiple alleles

_____ sex-linked pattern

Make a Punnett square to show the following crosses. You may use whatever letters you think are appropriate for the trait as long as you define them.

2. A red tribble is crossed with a lime green tribble and 1/2 of the offspring are red.
