*Resource Ecology* Herbert H.T. Prins, Frank van Langevelde, 2008-01-21 This multi author book deals with resource ecology which is the ecology of trophic interactions between consumers and their resources All the chapters were subjected to intense group discussions comments and critiques were subsequently used for writing new versions which were peer reviewed Each chapter is followed by a comment This makes the book ideal for teaching and course work because it

highlights the fact that ecology is a living and active research field      **Handbook of Digital Resources in Mathematics Education** Birgit Pepin, Ghislaine Gueudet, Jeffrey Choppin, 2024-06-21 This handbook presents the state of the art scholarship on theoretical frames mathematical content learning environments pedagogic practices teacher professional learning and policy issues related to the development and use of digital resources in mathematics education With the advent of more and more open access digital resources teachers choose from the web what they see fit for their classroom students choose in the moment what they need for their projects and learning paths However educators and students often find it difficult to choose from the abundance of materials on offer as they are uncertain about their quality and beneficial use It is clear that at a time of bouleversement of the teaching learning processes it is crucial to understand the quality and the potentially transformative aspects of digital resources This book provides comprehensive analyses of and insights into the transformative aspects of digital resources      **Unconventional Oil and Gas Resources Handbook** Y Zee Ma, Stephen

Holditch, 2015-10-06 Unconventional Oil and Gas Resources Handbook Evaluation and Development is a must have helpful handbook that brings a wealth of information to engineers and geoscientists Bridging between subsurface and production the handbook provides engineers and geoscientists with effective methodology to better define resources and reservoirs Better reservoir knowledge and innovative technologies are making unconventional resources economically possible and multidisciplinary approaches in evaluating these resources are critical to successful development Unconventional Oil and Gas Resources Handbook takes this approach covering a wide range of topics for developing these resources including exploration evaluation drilling completion and production Topics include theory methodology and case histories and will help to improve the understanding integrated evaluation and effective development of unconventional resources Presents methods for a full development cycle of unconventional resources from exploration through production Explores multidisciplinary integrations for evaluation and development of unconventional resources and covers a broad range of reservoir

characterization methods and development scenarios Delivers balanced information with multiple contributors from both academia and industry Provides case histories involving geological analysis geomechanical analysis reservoir modeling hydraulic fracturing treatment microseismic monitoring well performance and refracturing for development of unconventional reservoirs Scale, Heterogeneity, and the Structure and Diversity of Ecological Communities Mark E. Ritchie, 2009-09-28 Understanding and predicting species diversity in ecological communities is one of the great challenges in community ecology Popular recent theory contends that the traits of species are neutral or unimportant to coexistence yet abundant experimental evidence suggests that multiple species are able to coexist on the same limiting resource precisely because they differ in key traits such as body size diet and resource demand This book presents a new theory of coexistence that incorporates two important aspects of biodiversity in nature scale and spatial variation in the supply of limiting resources Introducing an innovative model that uses fractal geometry to describe the complex physical structure of nature Mark Ritchie shows how species traits particularly body size lead to spatial patterns of resource use that allow species to coexist He explains how this criterion for coexistence can be converted into a rule for how many species can be packed into an environment given the supply of resources and their spatial variability He then demonstrates how this rule can be used to predict a range of patterns in ecological communities such as body size distributions species abundance distributions and species area relations Ritchie illustrates how the predictions closely match data from many real communities including those of mammalian herbivores grasshoppers dung beetles and birds This book offers a compelling alternative to neutral theory in community ecology one that helps us better understand patterns of biodiversity across the Earth **Selected Water Resources Abstracts** ,1991 From Text to 'Lived' Resources Ghislaine Gueudet, Birgit Pepin, Luc Trouche, 2011-09-06 What kinds of curriculum materials do mathematics teachers select and use and how This question is complex in a period of deep evolutions of teaching resources with the proficiency of online resources in particular How do teachers learn from these materials and in which ways do they tailor them for their use and pupil learning Teachers collect resources select transform share implement and revise them Drawing from the French term *ing nerie documentaire* we call these processes documentation The literal English translation is to work with documents but the meaning it carries is richer Documentation refers to the complex and interactive ways that teachers work with resources in class and out of class individually but also collectively *Articulations Between Tangible Space, Graphical Space and Geometrical Space* Claire Guille-Biel Winder, Teresa Assude, 2023-07-26 This book aims to present some of the latest research in the didactics of space and geometry deepen some theoretical questions and open up new reflections for discourse Its focus is as much on the approach of geometry itself and its link with the structuring of space as it is on the practices within the classroom the dissemination of resources the use of different artefacts and the training of teachers in this field We study how spatial knowledge graphical knowledge and geometric knowledge are taken into account and articulated in the teaching of space and geometry in
