Engineering Mathematics K. Vairamanickham,2005-12-01      Cognitive Systems Chris Forsythe,Michael L.

Bernard,Timothy E. Goldsmith,2006-08-15 The leading thinkers from the cognitive science tradition participated in a

workshop sponsored by Sandia National Laboratories in July of 2003 to discuss progress in building their models. The goal was to summarize the theoretical and empirical bases for cognitive systems and to present exemplary developments in the field. Following the workshop a great deal of planning went into the creation of this book. Eleven of the twenty six presenters were asked to contribute chapters and four chapters are the product of the breakout sessions in which critical topics were discussed among the participants. An introductory chapter provides the context for this compilation. Cognitive Systems thus presents a unique merger of cognitive modeling and intelligent systems and attempts to overcome many of the problems inherent in current expert systems. It will be of interest to researchers and students in the fields of cognitive science, computational modeling, intelligent systems, artificial intelligence and human computer interaction.

**Mathematics** Candia Morgan, Anne Watson, Clare Tikly, 2004. This accessible and thought provoking book considers what beginning teachers need to know about learning, teaching, assessment, curriculum and professional development in the context of teaching mathematics to eleven to nineteen year olds. It is part of a new series of books that has as its starting point the fact that PGCE students are already subject specialists. The authors show how mathematics teachers can communicate their own enthusiasm for the subject and inspire their pupils to learn and enjoy learning. They provide practical advice which will help teachers and student teachers to plan, organize, manage and assess classroom work, make decisions about the content, ordering and level of difficulty of lessons, make sense of new subject material and how it contributes to wider educational aims, develop professionally by developing the subject as a whole. This is a comprehensive introduction to teaching mathematics in the secondary school which will be invaluable to teachers beginning their careers and those who are training to be mathematics teachers.

*Case-Based Textbook of Echocardiography* Anita Sadeghpour, Azin Alizadehasl, 2018-10-24. This volume is a step by step educational echocardiography textbook from basic principles to advanced concepts. It is designed to rationalise and instruct readers on the rapid development in echocardiographic techniques including real time three dimensional echocardiography, strain, strain rate imaging and speckle tracking which have greatly expanded the capabilities of cardiac imaging while overshadowing the importance of the basics of echocardiography. Case Based Textbook of Echocardiography offers a comprehensive review of echocardiography from basic skills to advanced techniques including practical information from recently published ASE/EACVI guidelines and explanatory movies and figures. Providing balance between the science and clinical pearls, it is of great interest for all trainee cardiologists and echocardiographers and helpful to all clinicians in cardiology, internal medicine, cardiac surgery, interventional cardiology and paediatric cardiology.
