How to Write and Publish a Scientific Paper Robert A Day, Barbara Gastel, 2006-04-26 Guide on writing and submitting a scientific paper for graduates to professionals *How to Conduct an Effective Peer Review* Gloria Barczak, Abbie Griffin, 2021-01-29 This crucial book guides academics and researchers through the process of peer reviewing manuscript articles outlining the methods and proficiencies required to write a high quality review Gloria Barczak and Abbie Griffin specifically highlight the importance of becoming a first rate reviewer to early career scholars **How to Write and Publish a Scientific Research Paper** Sophie Domingues-Montanari, 2011 **Systematic Approaches to a Successful Literature Review** Andrew Booth, Diana Papaioannou, Anthea Sutton, 2011-12-16 Reviewing the literature is an essential part of every research project This book takes you step by step through the process of approaching your literature review systematically applying systematic principles to a wide range of literature review types Through numerous examples case studies and exercises the book covers often neglected areas of literature review such as concept analysis scoping and mapping The book includes practical tools for supporting the various stages of the review process including managing your literature review searching the literature assessing the quality of the literature synthesising qualitative and or quantitative data writing up and presenting data **Systematic Approaches to a Successful Literature Review** is essential reading for any student or researcher looking to approach their literature review in a systematic way [Beyond open access: visions for open evaluation of scientific papers by post-publication peer review](#) Nikolaus Kriegeskorte, Diana Deca, A scientific publication system needs to provide two basic services access and evaluation The traditional publication system restricts the access to papers by requiring payment and it restricts the evaluation of papers by relying on just 2 4 pre publication peer reviews and by keeping the reviews secret As a result the current system suffers from a lack of quality and transparency of

the peer review evaluation process and the only immediately available indication of a new paper's quality is the prestige of the journal it appeared in. Open access is now widely accepted as desirable and is slowly beginning to become a reality. However, the second essential element, evaluation, has received less attention. Open evaluation, an ongoing post-publication process of transparent peer review and rating of papers, promises to address the problems of the current system. However, it is unclear how exactly such a system should be designed. The evaluation system steers the attention of the scientific community and thus the very course of science. For better or worse, the most visible papers determine the direction of each field and guide funding and public policy decisions. Evaluation therefore is at the heart of the entire endeavor of science. As the number of scientific publications explodes, evaluation and selection will only gain importance. A grand challenge of our time therefore is to design the future system by which we evaluate papers and decide which ones deserve broad attention. So far, scientists have left the design of the evaluation process to journals and publishing companies. However, the steering mechanism of science should be designed by scientists. The cognitive, computational, and brain sciences are best prepared to take on this task, which will involve social and psychological considerations, software design, and modeling of the network of scientific papers and their interrelationships. This Research Topic in *Frontiers in Computational Neuroscience* collects visions for a future system of open evaluation. Because critical arguments about the current system abound, these papers will focus on constructive ideas and comprehensive designs for open evaluation systems. Design decisions include: Should the reviews and ratings be entirely transparent, or should some aspects be kept secret? Should other information, such as paper downloads, be included in the evaluation? How can scientific objectivity be strengthened and political motivations weakened in the future system? Should the system include signed and authenticated reviews and ratings? Should the evaluation be an ongoing process such that promising papers are more deeply evaluated? How can we bring science and statistics to the evaluation process, e.g., should rating averages come with error bars? How should the evaluative information about each paper, e.g., peer ratings, be combined to prioritize the literature? Should different individuals and organizations be able to define their own evaluation formulae, e.g., weighting ratings according to different criteria? How can we efficiently transition toward the future system? Ideally, the future system will derive its authority from a scientific literature on community-based open evaluation. We hope that these papers will provide a starting point.
