**Cladistics** David M. Williams, Malte C. Ebach, 2020-08-06 This new edition of a foundational text presents a contemporary review of cladistics as applied to biological classification. It provides a comprehensive account of the past fifty years of discussion on the relationship between classification, phylogeny, and evolution. It covers cladistics in the era of molecular data, detailing new advances and ideas that have emerged over the last twenty-five years. Written in an accessible style by internationally renowned authors in the field, readers are straightforwardly guided through fundamental principles and terminology. Simple worked examples and easy-to-understand diagrams also help readers navigate complex problems that have perplexed scientists for centuries. This practical guide is an essential addition for advanced undergraduates, postgraduates, and researchers in taxonomy, systematics, comparative biology, evolutionary biology, and molecular biology.

*Diagrammatic Representation and Inference* Gem Stapleton, John Howse, John Lee, 2008-09-22 *Diagrams* is an international and interdisciplinary conference series covering all aspects of research on the theory and application of diagrams. Recent technological advances have enabled the large-scale adoption of diagrams in a diverse range of areas. Increasingly sophisticated visual representations are emerging, and to enable effective communication, insight is required into how diagrams are used and when they are appropriate for use. The pervasive everyday use of diagrams for communicating information and ideas serves to illustrate the importance of providing a sound understanding of the role that diagrams can and do play. Research in the field of diagrams aims to improve our understanding of the role of diagrams, sketches, and other visualizations in communication, computation, cognition, creative thought, and problem-solving. These concerns have triggered a surge of interest in the study of diagrams. The study of diagrammatic communication as a whole must be pursued as an interdisciplinary endeavour. *Diagrams 2008* was the fifth event in this conference series, which was launched in Edinburgh during September 2000. *Diagrams* attracts a large number of researchers from virtually all related fields, placing the conference as a major international event in the area. *Diagrams* is the only conference that provides a united forum for all areas that are concerned with the study of diagrams, for example, architecture, artificial intelligence, cartography, cognitive science, computer science, education, graphic design, history of science, human-computer interaction, linguistics, logic, mathematics, philosophy, psychology, and software modelling. We see issues from all of these fields discussed in the papers collected in the present volume.

*Dinosaurs* David E. Fastovsky, David B. Weishampel, 2012-08-27 Fully updated, this lively and beautifully illustrated undergraduate textbook emphasizes understanding science over memorization of dinosaur facts. Dave A.

Schoch, 2008-01-01 The modern theory of Evolution stands upon certain assumptions and has for over 150 years. It will no doubt surprise many to discover that these assumptions are unwarranted and unjustified by the evidence and in some instances even antagonistic to the evidence, therefore making them illegitimate. This book describes these assumptions.
