Primary Health Care Trisha Greenhalgh,2013-03-15

General practitioners and other primary care professionals have a leading role in contemporary health care which Trisha Greenhalgh explores in this highly praised new text. She provides perceptive and engaging insights into primary health care focussing on its intellectual roots its impact on the individual the family and the community the role of the multidisciplinary team contemporary topics such as homelessness ethnic health and electronic records Concise summaries highlighted boxes extensive referencing and a dedicated section on effective learning make this essential reading for postgraduate students tutors and researchers in primary care. Trish Greenhalgh in her frequent columns in the British Medical Journal more than any other medical journalist spoke to her fellow GPs in the language of experience but never without linking this to our expanding knowledge from the whole of human science. When I compare the outlines of primary care so lucidly presented in this wonderful book obviously derived from rich experience of real teaching and learning with the grand guignol theatre of London medical schools when I was a student 1947-52 the advance is stunning. From the foreword by Julian Tudor Hart Trish Greenhalgh is one of the international stars of general practice and a very clever thinker. This new book is a wonderful resource for primary health care and general practice. Every general practice registrar should read this book and so should every general practice teacher and primary care researcher. Professor Michael Kidd Head of the Department of General Practice University of Sydney and Immediate Past President of The Royal Australian College of General Practitioners. This important new book by one of primary care's most accomplished authors sets out clearly the academic basis for further developments in primary health care. Health systems will only function effectively if they recognise the importance of high quality primary care so I strongly recommend this book to students teachers researchers practitioners and policy makers. Professor Martin Marshall Deputy Chief Medical Officer Department of Health UK

Selected Papers Calvin C. Elgot, 2012-12-06. Cal Elgot was a very serious and thoughtful researcher who with great determination attempted to find basic explanations for certain mathematical phenomena as the selection of papers in this volume well illustrate. His approach was for the most part rather finitist and constructivist and he was inevitably drawn to studies of the process of computation. It seems to me that his early work on

decision problems relating automata and logic starting with his thesis under Roger Lyndon and continuing with joint work with Hiichi Wright Copi Rutledge Mezei and then later with Rabin set the stage for his attack on the theory of computation through the abstract treatment of the notion of a machine This is also apparent in his joint work with A Robinson reproduced here and in his joint papers with John Shepherdson Of course in the light of subsequent work on decision problems by Hiichi Rabin Shelah and many many others the subject has been placed on a completely different plane from what it was when Elgot left the area But I feel that his papers results and style were very definitely influential at the time and may well have altered the course of the investigation of these problems As Sammy Eilenberg explains the next big influence on Elgot s thinking was category theory which gave him a way of expressing his ideas in a sharply algebraic manner The joint book with Eilenberg is one illustration of this influence *New Africa Technology* A. Kenyon,2003-12 [How to Write Better Medical Papers](#) Michael Hanna,2019-03-20 This book guides medical researchers through all stages of transforming their scientific data and ideas into a published paper Many researchers in medicine including the life sciences and health sciences struggle to get their research written and published Manuscripts are typically rejected and or sent back for revisions several times before ever being published One reason for this is that researchers have not received much instruction in the specific subjects and skills needed to write and publish scientific medical papers research methodology ethics statistics data visualization writing revising and the practicalities of publishing Instead of wasting the reader s time discussing trivialities of punctuation spelling etc this book tackles all the major scientific issues that routinely lead to manuscripts getting rejected from the journals The section Preparing covers the range of methodological ethical and practical aspects that researchers need to address before starting to write their paper The section Analyzing reviews commonplace problems in the statistical analysis and presentation and how to resolve those problems The section Drafting describes what to write in all the various parts of a paper the Introduction Methods Results Discussion Abstract etc The section Revising explains and illustrates how to improve the writing style of any manuscript The section Publishing discusses how to navigate the peer review process and all other practical aspects of the publishing phase This book draws on the author s decade of experience as an independent medical writer and research consultant but it is not written merely as the personal opinion of yet another expert The entire book is grounded in the existing scientific and scholarly literature with extensive references and a lengthy annotated bibliography so readers can quickly obtain more information on any aspect they want Thus this book provides a more evidence based scholarly account of how medical scientific papers should be written in order to improve medical communication and accelerate scientific progress After reading this entire book cover to cover medical researchers will know how to write better quality medical papers and they will be able to publish their work in better journals with less time and struggle This book is essential reading for anyone conducting research in clinical medicine life sciences or health sciences
