Fundamental Planetary Science Jack J. Lissauer, Imke de Pater, 2013-09-16 A quantitative broad based introduction to planetary systems science for advanced undergraduate students including planet formation extrasolar planets and planetary habitability

Saturn from Cassini-Huygens Michele Dougherty, Larry Esposito, Stamatios Krimigis, 2009-09-30 This book is one of two volumes meant to capture to the extent practical the scientific legacy of the Cassini Huygens prime mission a landmark in the history of planetary exploration As the most ambitious and interdisciplinary planetary exploration mission own to date it has extended our knowledge of the Saturn system to levels of detail at least an order of magnitude beyond that gained from all previous missions to Saturn Nestled in the brilliant light of the new and deep understanding of the Saturn planetary system is the shiny nugget that is the spectacularly successful collaboration of individuals organizations and governments in the achievement of Cassini Huygens In some ways the partnerships formed and lessons learned may be the most enduring legacy of Cassini Huygens The broad international coalition that is Cassini Huygens is now conducting the Cassini Equinox Mission and planning the Cassini Solstice Mission and in a major expansion of those fruitful efforts has extended the collaboration to the study of new agency missions to both Jupiter and Saturn Such ventures have and will continue to enrich us all and evoke a very optimistic vision of the future of international collaboration in planetary exploration The two volumes in the series Saturn from Cassini Huygens and Titan from Cassini Huygens are the direct products of the efforts of over 200 authors and co authors Though each book has a different set of three editors the group of six editors for the two volumes has worked together through every step of the process to ensure that these two volumes are a set

Saturn in the 21st Century Kevin H. Baines, F. Michael Flasar, Norbert Krupp, Tom Stallard, 2019 A detailed overview of Saturn's formation evolution and structure written by eminent planetary scientists involved in the Cassini Orbiter mission

The Magnetodiscs and Aurorae of Giant Planets Karoly Szego, Nicholas Achilleos, Chris Arridge, Sarah Badman, Peter Delamere, Denis Grodent, Margaret Galland Kivelson, Philippe Louarn, 2015-10-14 Readers will find grouped together here the most recent observations current theoretical models and present understanding of the coupled atmosphere magnetosphere and solar wind system The book begins with a general discussion of mass energy and momentum transport in magnetodiscs The physics of partially ionized plasmas of the giant planet magnetodiscs is of general interest throughout the field of space physics heliophysics and astrophysical plasmas therefore understanding the basic physical processes associated with magnetodiscs has universal applications The second chapter characterizes the solar wind interaction and auroral responses to solar wind driven dynamics The third chapter describes the role of magnetic reconnection and the effects on plasma transport Finally the last chapter characterizes the spectral and spatial properties of auroral emissions distinguishing between solar wind drivers and internal driving mechanisms The in depth reviews provide an excellent reference for future research in this discipline

Over a half century of exploration of the Earth's space environment it has become evident that the interaction between the ionosphere and the magnetosphere plays a dominant role in the evolution and dynamics of magnetospheric plasmas and fields Interestingly it was recently discovered that this same interaction is of fundamental importance at other planets and moons throughout the solar system Based on papers presented at an interdisciplinary AGU Chapman Conference at Yosemite National Park in February 2014 this volume provides an intellectual and visual journey through our exploration and discovery of the paradigm changing role that the ionosphere plays in determining the filling and dynamics of Earth and planetary environments The 2014 Chapman conference marks the 40th anniversary of the initial magnetosphere ionosphere coupling conference at Yosemite in 1974 and thus gives a four decade perspective of the progress of space science research in understanding these fundamental coupling processes Digital video links to an online archive containing both the 1974 and 2014 meetings are presented throughout this volume for use as an historical resource by the international heliophysics and planetary science communities Topics covered in this volume include Ionosphere as a source of magnetospheric plasma Effects of the low energy ionospheric plasma on the stability and creation of the more energetic plasmas The unified global modeling of the ionosphere and magnetosphere at the Earth and other planets New knowledge of these coupled interactions for heliophysicists and planetary scientists with a cross disciplinary approach involving advanced measurement and modeling techniques Magnetosphere Ionosphere Coupling in the Solar System is a valuable resource for researchers in the fields of space and planetary science atmospheric science space physics astronomy and geophysics Read an interview with the editors to find out more <https://eos.org/editors-vox-filling-earths-space-environment-from-the-sun-or-the-earth> The Polar Wind of Saturn Madai Adele Frey,1997 Literature 1991, Part 2 Astronomisches Rechen-Institut,2013-06-29
