Against All Odds Sarah Forster-Heinzer, 2015-04-21 It is nearly impossible to overestimate the significance of a professional ethos in pedagogical situations Most theories of education understand ethos and ethical acting as belonging to the core of the pedagogical profession Despite this evidence remarkably few empirical studies exist on ethos This book has three main aims 1 to conceptualize the pedagogical ethos at the theoretical level 2 to operationalize it systematically and 3 to study it empirically from the trainers perspective but also from that of apprentices Part 1 offers a critical discussion on different theoretical approaches of professional morality These include theories on moral values or professional codes virtue ethics professional sensitivity moral commitment and caring Identified communalities are combined to form a new model of professional ethos More intensively than other existing theories the ethos approach presented in this book stresses the content's situational impact on decision making and motivation The main question guiding the instrument development dealt with in Part 2 asks how we can distinguish professional morality from the general notion that people should be good In order to answer this question vocational education but also a trainer's pedagogical duties and responsibilities are discussed Part 3 then presents the result of two empirical studies with vocational trainers and apprentices It offers some interesting findings for further reflection input not only relevant for researchers but also educational institutes professional associations and practitioners themselves In short this book contributes significantly to research on professional morality as well as vocational education
