Advances in Intelligent Information and Database Systems Ngoc Thanh Nguyen, Radoslaw Katarzyniak, 2010-04-09

Intelligent information and database systems are two closely related and well established subfields of modern computer science. They focus on the integration of artificial intelligence and classic database technologies in order to create the class of next generation information systems. The major target of this new generation of systems is to provide end users with intelligent behavior simple and or advanced learning problem solving uncertain and certain reasoning self organization cooperation etc. Such intelligent abilities are implemented in classic information systems to make them autonomous and user oriented in particular when advanced problems of multimedia information and knowledge discovery access retrieval and manipulation are to be solved in the context of large distributed and heterogeneous environments. It means that intelligent knowledge based information and database systems are used to solve basic problems of large collections management carry out knowledge discovery from large data collections reason about information under uncertain conditions support users in their formulation of complex queries etc. Topics discussed in this volume include but are not limited to the foundations and principles of data information and knowledge models methodologies for intelligent information and database systems analysis design implementation validation maintenance and evolution.
