Office for Subject Cataloging Policy, 2013 **Human Behavior Analysis: Sensing and Understanding** Zhiwen Yu, Zhu Wang, 2020-02-29 Over the last decade there has been a growing interest in human behavior analysis motivated by societal needs such as security natural interfaces affective computing and assisted living However the accurate and non invasive detection and recognition of human behavior remain major challenges and the focus of many research efforts Traditionally in order to identify human behavior it is first necessary to continuously collect the readings of physical sensing devices e g camera GPS and RFID which can be worn on human bodies attached to objects or deployed in the environment Afterwards using recognition algorithms or classification models the behavior types can be identified so as to facilitate advanced applications Although such traditional approaches deliver satisfactory performance and are still widely used most of them are intrusive and require specific sensing devices raising issues such as privacy and deployment costs In this book we will present our latest findings on non invasive sensing and understanding of human behavior Specifically this book differs from existing literature in the following senses Firstly we focus on approaches that are based on non invasive sensing technologies including both sensor based and device free variants Secondly while most existing studies examine individual behaviors we will systematically elaborate on how to understand human behaviors of various granularities including not only individual level but also group level and community level behaviors Lastly we will discuss the most important scientific problems and open issues involved in human behavior analysis **Library of Congress Subject Headings** Library of Congress. Office for Subject Cataloging Policy, 1992 *Human-Centered Software Engineering - Integrating Usability in the Software Development Lifecycle* Ahmed Seffah, Jan Gulliksen, Michel C. Desmarais, 2006-06-26 Human Centered Software Engineering Bridging HCI Usability and Software Engineering From its beginning in the 1980 s the field of human computer interaction HCI has been a multidisciplinary arena By this I mean that there has been an explicit recognition that distinct skills and perspectives are required to make the whole effort of designing usable computer systems work well Thus people with backgrounds in Computer Science CS and Software Engineering SE joined with people with backgrounds in various behavioral science disciplines e g cognitive and social psychology anthropology in an effort where all perspectives were seen as essential to creating usable systems But while the field of HCI brings individuals with many background disciplines together to discuss a common goal the development of useful usable satisfying systems the form of the collaboration remains unclear Are we striving to coordinate the varied activities in system development or are we seeking a richer collaborative framework In coordination Usability and SE skills can remain quite distinct and while the activities of each group might be critical to the success of a project we need only insure that critical results are provided at appropriate points in the development cycle Communication by one group to the other during an activity might be seen as

only minimally necessary In collaboration there is a sense that each group can learn something about its own methods and processes through a close partnership with the other Communication during the process of gathering information from target users of a system by usability professionals would not be seen as something that gets in the way of the essential work of software engineering professionals **Part 11 and Computer Validation Guidebook** Daniel Farb, Bruce Gordon, 2005

The Material Life of Human Beings Michael Brian Schiffer, 2002-01-22 In this ground breaking work the distinguished anthropological theorist Michael Brian Schiffer presents a profound challenge to the social sciences Through a broad range of examples he demonstrates how theories of behaviour and communication have too often ignored the fundamental importance of objects in human life In *The Material Life of Human Beings* the author builds upon the premise that the most important feature of human life is not language but the relationships which take place between people and objects The author shows that artifacts are involved in all modes of human communication be they visual auditory or tactile By creatively folding elements of postmodernist thought into a scientific framework he creates new concepts and models for understanding and analysing communication and behavior Challenging established theories within the social sciences Michael Brian Schiffer offers a reassessment of the centrality of materiality to everyday life

Ontology Engineering in a Networked World Mari Carmen Suárez-Figueroa, Asunción Gómez-Pérez, Enrico Motta, Aldo Gangemi, 2012-03-26 The Semantic Web is characterized by the existence of a very large number of distributed semantic resources which together define a network of ontologies These ontologies in turn are interlinked through a variety of different meta relationships such as versioning inclusion and many more This scenario is radically different from the relatively narrow contexts in which ontologies have been traditionally developed and applied and thus calls for new methods and tools to effectively support the development of novel network oriented semantic applications This book by Suárez-Figueroa et al provides the necessary methodological and technological support for the development and use of ontology networks which ontology developers need in this distributed environment After an introduction in its second part the authors describe the NeOn Methodology framework The book's third part details the key activities relevant to the ontology engineering life cycle For each activity a general introduction methodological guidelines and practical examples are provided The fourth part then presents a detailed overview of the NeOn Toolkit and its plug ins Lastly case studies from the pharmaceutical and the fishery domain round out the work The book primarily addresses two main audiences students and their lecturers who need a textbook for advanced undergraduate or graduate courses on ontology engineering and practitioners who need to develop ontologies in particular or Semantic Web based applications in general Its educational value is maximized by its structured approach to explaining guidelines and combining them with case studies and numerous examples The description of the open source NeOn Toolkit provides an additional asset as it allows readers to easily evaluate and apply the ideas presented
