Spatial Dynamics and Ecology of Large Ungulate Populations in Tropical Forests of India N. Samba Kumar, K. Ullas Karanth, James D. Nichols, Srinivas Vaidyanathan, Beth Gardner, Jagdish Krishnaswamy, 2020-11-02 Large ungulates in tropical forests are among the most threatened taxa of mammals Excessive hunting degradation of and encroachments on their natural habitats by humans have contributed to drastic reductions in wild ungulate populations in recent decades As such reliable assessments of ungulate habitat relationships and the spatial dynamics of their populations are urgently needed to provide a scientific basis for conservation efforts However such rigorous assessments are methodologically complex and logistically difficult and consequently many commonly used ungulate population survey methods do not address key problems As a result of such deficiencies key parameters related to population distribution abundance habitat ecology and management of tropical forest ungulates remain poorly understood This book addresses this critical knowledge gap by examining how population abundance patterns in five threatened species of large ungulates vary across space in the tropical forests of the Nagarhole Bandipur reserves in southwestern India It also explains the development and application of an innovative methodology spatially explicit line transect sampling based on an advanced hierarchical modelling under the Bayesian inferential framework which overcomes common methodological deficiencies in current ungulate surveys The methods and results presented provide valuable reference material for researchers and professionals involved in studying and managing wild ungulate populations around the globe
