*Managerial Economics* Nick Wilkinson, 2022-01-13 Managerial economics meaning the application of economic methods in the managerial decision making process is a fundamental part of any business or management course. The current business environment presents managers with increasingly difficult decisions amidst the Covid 19 pandemic and associated lockdowns as well as the digital revolution and improved technology. Now in its second edition, this textbook features a new focus on how managerial economics has been transformed by the increasing importance of digitization within both the workplace and wider economy. It also features a new chapter on consumer theory which emphasizes psychological factors and behavioural economics. Wilkinson adapts a user friendly problem solving approach to take the reader in gradual steps from simple problems through increasingly difficult material to complex case studies demonstrating how to apply the principles of managerial economics to real life situations. This book will be invaluable to business and economics students at both undergraduate and graduate levels.

**Engineering Managerial Economic Decision and Risk Analysis** Teddy Steven Cotter, 2021-11-18 This book directs the engineering manager or the undergraduate student preparing to become an engineering manager who is or will become actively engaged in the management of economic risk trade off decisions for engineering investments within an organizational system. In today's global economy, this may mean managing the economic risks of engineering investments across national boundaries in international organizations, government or service organizations. As such, this is an applied book. The book's goal is to provide an easy to understand, up to date and coherent treatment of the management of the economic risk trade offs of engineering investments. This book accomplishes this goal by cumulatively sequencing knowledge content from foundational economic and accounting concepts to cost estimating to the traditional engineering economics knowledge culminating in fundamental engineering managerial economic decision making incorporating risk into engineering management economic decisions.
