**refrigerantes** Ángel Luis Miranda Barreras, 2013-07-01 Este es un libro de gases fluorados que evita las complicaciones técnicas innecesarias. Está pensado para un público con conocimiento medio de la materia. Se presenta una aproximación a la técnica general de los fluidos frigoríficos así como una colección de fichas con los datos técnicos más importantes de todos los utilizados sin pretender que la información sea exhaustiva. No aparecen los CFC porque están prohibidos pero sí los HCFC debido a que hasta finales del 2014 pueden utilizarse regenerados o recuperados. A partir de esta fecha también están prohibidos. Hay un capítulo divulgativo exclusivo para el aficionado a un refrigerante industrial bueno pero con problemas de seguridad. En un anexo se han incluido las tablas de propiedades físicas y termodinámicas tanto del vapor y líquido saturado como del vapor recalentado de algunos refrigerantes así como las gráficas p-h de los mismos fluidos frigoríficos. Se da mucha importancia al aspecto práctico de la manipulación de los refrigerantes sin pretender pasar por delante de los fabricantes y empresas especializadas del sector que disponen de su propio material. **Manual de Calefacción** Lluís Jutglar i

Banyeras, Ferroli, Ángel Luis Miranda Barreras, 2011-04 Esta obra constituye un manual completo para el estudio y el proyecto de las instalaciones de calefacción desde una perspectiva eminentemente práctica sin olvidar el rigor y la necesidad de fundamentar los principios de esta apasionante y necesaria técnica de ingeniería. Para ello los autores han contado con el asesoramiento inestimable de la empresa Ferroli que ha puesto a su disposición todos los medios para que la perspectiva práctica sea realista y actual. La obra consta de seis partes: Teoría, Equipamiento, Aplicaciones, Instalaciones, Respeto al medio ambiente y Anexos. En la parte I Teoría se exponen los principios de psicrometría, las condiciones de bienestar, los principios generales de la calefacción y el agua caliente sanitaria y como tema fundamental el cálculo de la carga térmica de calefacción. Se dedica un capítulo monográfico al estudio de las condensaciones. La parte II Equipamiento se dedica al importante y fundamental estudio de las calderas y de los elementos que nos permitirán construir el sistema de calefacción: tuberías, conductos, bombas y ventiladores. Se dedica una importancia especial al estudio de los emisores, intercambiadores de calor y acumuladores por ser partes fundamentales de una instalación de calefacción. La parte III Aplicaciones es el objetivo principal de la obra. Se estudian los sistemas de calefacción primero de una forma genérica y después centrada en los sistemas: todo agua, todo aire y calefacción eléctrica. Es evidente que se dedica una atención preferente a los sistemas de alta y baja entalpía que son los más habituales en las instalaciones de calefacción. Se termina esta parte con un estudio de los sistemas de ahorro de energía y de contabilidad energética tan importantes en este ambiente actual de subida constante del precio de los combustibles habituales de los sistemas de calefacción. La parte IV Instalaciones se dedica a la sala de máquinas y calderas, chimeneas y conductos de humos, sistema eléctrico y aparcamiento de elementos y sistemas de control de ruido y vibraciones, tratamiento y calidad del agua y la forma de prevenir la legionella. La parte V Respeto al medio ambiente está dedicada a las técnicas que se consideran más respetuosas con el medio ambiente. Se estudian las energías renovables: la energía solar, la energía geotérmica y la biomasa. La parte VI está constituida por una serie de anexos. Se ha incluido un formulario que permite

al lector apresurado ir directamente a la expresión que necesita. Aquí debemos advertir que la fórmula no debe sacarse del contexto del capítulo por lo que solo es aconsejable su consulta si se conoce muy bien el tema referenciado. También se incluyen una serie de consejos prácticos muy generales que están relacionados con lo que el ingeniero llama el buen arte en este caso aplicado a las instalaciones de calefacción. Hay que destacar que la obra contiene numerosos ejercicios y ejemplos para un correcto seguimiento de las explicaciones así como numerosas tablas y datos prácticos para facilitar el cálculo del proyecto de calefacción. El lector está ante una obra nueva y actual. Se abordan aspectos de tremenda actualidad tales como las instalaciones de agua caliente de baja temperatura con modernas calderas de alta eficiencia así como las instalaciones solares geotérmicas y de biomasa.
