How do substances move in and out of cells?

Why?

Advertisements for sports drinks, such as Gatorade®, PowerAde®, and Vitaminwater™, etc., seem to be everywhere. All of these drinks are supposed to help your body recover and replenish lost electrolytes, fluids, and vitamins after exercise. But how do the essential molecules contained in these drinks get into your cells quickly to help you recover after exercise?

Model 1 – Simple Diffusion

1. How many different types of molecules are shown in Model 1?
Two.
2. Count and record the number of triangles and circles found on each side of the membrane.
Triangles – 14 on left, none on right.
Circles – 12 on left, 13 on right.
3. Which shape is larger?
Triangle.
4. Describe the direction of the movement of the molecules in Model 1?
They move in all directions.
5. Which molecules are able to pass through the semi-permeable membrane? Justify your answer.
The dots, because they are small and can fit through the gaps, and because they are shown as equally distributed on both sides of the membrane.
6. If you left this "system" for an extended period of time and then viewed it again, would you expect to find any changes in the concentrations of the molecules on either side of the membrane? Justify your answer.
No, the concentration of triangles will remain high on the left and none on the right as they can't pass through the membrane and the circles will stay evenly distributed on both sides of the membrane due to random movement.

The Structure of Biological Membranes Philip L. Yeagle, 2011-07-18. Biological membranes provide the fundamental structure of cells and viruses. Because much of what happens in a cell or in a virus occurs on or across biological membranes, the study of membranes has rapidly permeated the fields of biology, pharmaceutical chemistry, and materials science. *The Structure of Biological Membranes*, Third Edition, provides a comprehensive and up-to-date treatment of the structure and function of biological membranes.

Mammalian Cell Membranes G. A. Jamieson, D. M. Robinson, 2014-05-20. *Mammalian Cell Membranes*, Volume 1: General Concepts, is a collection of papers that deals with the physical and chemical studies focusing on membrane structure and function. This collection reviews the interpretation of the anatomy of the mammalian cell, including its separation and cultivation. The different methods of isolation of its surface membrane are then evaluated to bring some understanding of the subject. More descriptions of the various physical techniques adopted to membrane constituents and to cell membrane research, such as nuclear magnetic resonance, electron spin resonance, fluorescence, and flash photolysis spectroscopy, are given. Discoveries of mitochondrial DNA and other techniques have increased investigation of the synthesis and components of functional mitochondria, leading to different perspectives on models of membrane structure. This book can serve the needs of biochemists and microbiologists in advancing their work, research, and understanding of mammalian cell membranes.
