Hirayama, C. Guminski, Z. Galus, 2017-03-03 The volume covers binary amalgams of all the metals together with those of carbon silicon and boron a total of 76 systems Complete literature coverage extends through 1983 The emphasis is on accurate evaluated solubility data but phase diagrams have been included where they have been defined and will aid the reader in assigning the solid liquid equilibrium The data have been critically evaluated and are classified as recommended when independent determinations agree within experimental error The data may also be used to compute thermodynamic properties of the binary components **Information Circular** United States. Bureau of Mines, 1934 The Determination of Mercury Craig Miller Bouton, Lionel Herman Duschak, 1920 **Physicochemical Treatment Processes** Lawrence K. Wang, Yung-Tse Hung, Nazih K. Shammash, 2007-11-13 The past 30 years have seen the emergence of a growing desire worldwide to take positive actions to restore and protect the environment from the degrading effects of all forms of pollution air noise solid waste and water Because pollution is a direct or indirect consequence of waste the seemingly idealistic demand for zero discharge can be construed as an unrealistic demand for zero waste However as long as waste exists we can only attempt to abate the subsequent pollution by converting it to a less noxious form Three major questions usually arise when a particular type of pollution has been identified 1 How serious is the pollution 2 Is the technology to abate it available and 3 Do the costs of abatement justify the degree of abatement achieved The principal intention of the Handbook of Environmental Engineering series is to help readers formulate answers to the last two questions The traditional approach of applying tried and true solutions to specific pollution problems has been a major contributing factor to the success of environmental engineering and has accounted in large measure for the establishment of a methodology of pollution control However realization of the ever increasing complexity and interrelated nature of current environmental problems makes it imperative that intelligent planning of pollution abatement systems be undertaken **Advanced Pharmaceutical Solids** Jens T.
