This unique MERLO transmission layout uses two variable hydraulic piston motors, connected in parallel to a single variable displacement hydraulic pump.

Each motor independently powers a drive shaft connected to front and rear wheels on one side of the machine.

A differential effect is automatically achieved by a parallel connection of the hydraulic circuit.

This ensures high traction for all four wheels in even the most difficult ground conditions.

A: Variable displacement piston motors (one for each side)

B: Variable displacement hydraulic pump with automatic management system

C: Left transmission shaft

D: Right transmission shaft
