

METALWORK

Paper 6040/01
Theory, Drawing and Design

General comments

This year there was a single centre entry. All candidates made a reasonable attempt at both parts of the question paper. In **Section A** all questions were attempted. **Questions 1** and **2** were the most popular and **Question 3** was the least popular.

Comments on specific questions

Section A

Question 1

This question was the most popular with the majority of candidates attempting it.

- (a) Good knowledge of datum surfaces. Many took the measurement and marked two points and then joined with a rule, rather than using an engineers square and odd leg callipers.
- (iii) Good knowledge of dividers.
- (b) Candidates all attempted to hold, cut and finish the edges. The best answers followed the guidance in the question.

Question 2

Several named a non ferrous metal at (a), but some gave a ferrous metal.

- (b) Again, the best answers followed the question closely. Candidates need to note the bracketed marks. Each of the parts (i) – (iv) were worth the same number of marks and answers need to match that, in notes **and** sketches.

Question 3

This was the least popular question, with insufficient marks for the examiners to comment on.

Question 4

Some good answers here showing knowledge of internal and external threads. It is obvious that candidates are familiar with hand cutting of threads and are aware of good practice.

- (b) Good knowledge was shown of the reason for using lubricant.

Question 5

This was the second least popular question. Those who did attempt this question showed that they were familiar with the sequence of cutting operations to produce the shape shown. Also, in part (b), some knowledge of the 3 jaw chuck was shown.
