Narratives of Qualitative Research uses a novel form of writing about how to do qualitative research called a praxis narrative Each narrative is told from the author s perspective in carrying out one of his past research studies in the social sciences Told chronologically and in a first person voice the narratives position the reader alongside the narrator so as to vicariously experience how research happens in its situated particulars Rather than a set of idealizations and universalized pronouncements the author reveals what really goes on when one is in the thick of complex and challenging research studies the points of trouble along with the successes This will be relevant to researchers who have already undertaken one or more empirical research studies though not necessarily using qualitative approaches and now find themselves facing something new a new analytic method a new theoretical lens a new form of data collection a new domain of research questions a new rhetorical approach This requires letting go of the secure handholds of prescribed methods and responding to the contingencies that arise in the midst of the research The reader is invited to follow along as the author makes visible his praxis of qualitative research Unlike more conventional texts in this unique alternative the reader can follow the author s journey through his research studies as a way to reorient their conception of qualitative research and their own praxis of it This is fascinating reading for qualitative researchers and students taking qualitative research courses across the social sciences education and behavioural sciences *The Battle over Patents* Stephen H. Haber,Naomi R. Lamoreaux,2021-08-06

An examination of how the patent system works imperfections and all to incentivize innovation Do patents facilitate or frustrate innovation Lawyers economists and politicians who have staked out strong positions in this debate often attempt to validate their claims by invoking the historical record but they frequently get the history wrong *The Battle over Patents* gets it right Bringing together thoroughly researched essays from prominent historians and social scientists this volume traces the long and contentious history of patents and examines how they have worked in practice Editors Stephen H Haber and Naomi R Lamoreaux show that patent systems are the result of contending interests at different points in production chains battling over economic surplus The larger the potential surplus the more extreme are the efforts of contending parties now and in the past to search out generate and exploit any and all sources of friction Patent systems as human creations are therefore necessarily ridden with imperfections This volume explores these shortcomings and explains why despite all the

debate historically US style patent systems still dominate all other methods of encouraging inventive activity
