

Graph 3.1: Double OB-H-V Base shear in kN

Graph 3.2: Multi OB-H-V Base shear in kN

#### Discussion – Base shear

- By analysing the above graph it is observed that by introduction of outrigger system there will be an increase in base shear.
- The base shear is increased when outrigger is provided it occurs due to increase in stiffness and mass.
- The base shear will be less for the outrigger system compare to the outrigger with belt truss system.

#### 4. CONCLUSIONS

As per the study made the following conclusion have been arrived at

- The introduction of outrigger and outrigger with belt truss there is a significant contribution to the stiffness of the structure.
- For single, double, multi storeys the provision of and outrigger with belt truss system at 15, 15-30, 15-30-45 storeys will increase the lateral stiffness of the structure and resulting the reduction of natural time period.
- The base shear is increased when outrigger is provided and base shear will be less for the outrigger system when compared to the outrigger with belt truss system.
- Providing a outrigger and outrigger with belt truss system at 15, 15-30, 15-30-45 storey will decrease the displacement of the structure and hence it is

effective in resisting the lateral force compare to the other stories.
