Genetic Programming Theory and Practice Rick Riolo,Bill Worzel,2012-12-06 Genetic Programming Theory and Practice explores the emerging interaction between theory and practice in the cutting edge machine learning method of Genetic Programming GP The material contained in this contributed volume was developed from a workshop at the University of Michigan s Center for the Study of Complex Systems where an international group of genetic programming theorists and practitioners met to examine how GP theory informs practice and how GP practice impacts GP theory The contributions cover the full spectrum of this relationship and are written by leading GP theorists from major universities as well as active practitioners from leading industries and businesses Chapters include such topics as John Koza s development of human competitive electronic circuit designs David Goldberg s application of competent GA methodology to GP Jason Daida s discovery of a new set of factors underlying the dynamics of GP starting from applied research and Stephen Freeland s essay on the lessons of biology for GP and the potential impact of GP on evolutionary theory

Yao,Evelyn Lutton,Juan Julian Merelo,Hans-Paul Schwefel,2007-12-07 We are proud to introduce the proceedings of the Sixth International Conference on Parallel Problem Solving from Nature PPSN VI held in Paris France on 18 20 September 2000 PPSN VI was organized in association with the Genetic and Evolutionary Computing Conference GECCO 2000 and the Congress on Evolutionary Computation CEC 2000 reflecting the beneficial interaction between the conference activities in Europe and in the USA in the field of natural computation Starting in 1990 in Dortmund Germany Proceedings LNCS vol 496 Springer 1991 this biannual meeting has been held in Brussels Belgium Proceedings Elsevier 1992 Jerusalem Israel Proceedings LNCS vol 866 Springer 1994 Berlin Germany Proceedings LNCS vol 1141 Springer 1996 and Amsterdam The Netherlands Proceedings LNCS vol 1498 Springer 1998 where it was decided that Paris would be the location of the 2000 conference with Marc Schoenauer as the general chair The scientific content of the PPSN conference focuses on problem

solving paradigms gleaned from natural models. Characteristic for Natural Computing is the metaphorical use of concepts, principles and mechanisms underlying natural systems such as evolutionary processes involving mutation, recombination and selection in natural evolution; annealing or punctuated equilibrium processes of many particle systems in physics; growth processes in nature and economics; collective intelligence in biology; DNA based computing in molecular chemistry; and multi-cellular behavioral processes in neural and immune networks. NetQuest Deborah Athas Dardis, 1997 *Behavioral Program Synthesis with Genetic Programming* Krzysztof Krawiec, 2015-12-15 Genetic programming (GP) is a popular heuristic methodology of program synthesis with origins in evolutionary computation. In this generate and test approach, candidate programs are iteratively produced and evaluated. The latter involves running programs on tests where they exhibit complex behaviors reflected in changes of variables, registers or memory. That behavior not only ultimately determines program output but may also reveal its hidden qualities and important characteristics of the considered synthesis problem. However, the conventional GP is oblivious to most of that information and usually cares only about the number of tests passed by a program. This evaluation bottleneck leaves search algorithm underinformed about the actual and potential qualities of candidate programs. This book proposes behavioral program synthesis, a conceptual framework that opens GP to detailed information on program behavior in order to make program synthesis more efficient. Several existing and novel mechanisms subscribing to that perspective to varying extent are presented and discussed, including implicit fitness sharing, semantic GP, co-solvability, trace convergence analysis, pattern guided program synthesis, and behavioral archives of subprograms. The framework involves several concepts that are new to GP, including execution record, combined trace and search driver, a generalization of objective function. Empirical evidence gathered in several presented experiments clearly demonstrates the usefulness of behavioral approach. The book contains also an extensive discussion of implications of the behavioral perspective for program synthesis and beyond.

Genetic Programming Maarten Keijzer, Andrea Tettamanzi, Pierre Collet, Jano van Hemert, Marco Tomassini, 2005-03-10 In this volume we present the contributions for the 18th European Conference on Genetic Programming EuroGP 2005. The conference took place from 30 March to 1 April in Lausanne, Switzerland. EuroGP is a well established conference and the only one exclusively devoted to genetic programming. All previous proceedings were published by Springer in the LNCS series. From the outset EuroGP has been co-located with the EvoWorkshops focusing on applications of evolutionary computation. Since 2004 EvoCOP, the conference on evolutionary combinatorial optimization, has also been co-located with EuroGP, making this year's combined events one of the largest dedicated to evolutionary computation in Europe. Genetic programming (GP) is evolutionary computation that solves complex problems or tasks by evolving and adapting a population of computer programs using Darwinian evolution and Mendelian genetics as its sources of inspiration. Some of the 34 papers included in these proceedings address foundational and theoretical issues, and there is also a wide variety of papers dealing with different application areas such as computer science.
