Sharan, 2009-11-18 This is an introductory book on the general theory of relativity based partly on lectures given to students of M Sc Physics at my university The book is divided into three parts The first part is a preliminary course on general relativity with minimum preparation The second part builds the mathematical background and the third part deals with topics where mathematics developed in the second part is needed The first chapter gives a general background and introduction This is followed by an introduction to curvature through Gauss Theorema Egregium This theorem expresses the curvature of a two dimensional surface in terms of intrinsic quantities related to the infinitesimal distance function on the surface The student is introduced to the metric tensor Christoffel symbols and Riemann curvature tensor by elementary methods in the familiar and visualizable case of two dimensions This early introduction to geometric quantities equips a student to learn simpler topics in general relativity like the Newtonian limit red shift the Schwarzschild solution precession of the perihelion and bending of light in a gravitational field Part II chapters 5 to 10 is an introduction to Riemannian geometry as required by general relativity This is done from the beginning starting with vectors and tensors I believe that students of physics grasp physical concepts better if they are not shaky about the mathematics involved The Mathematics Teacher, 1913 **Catalog of Copyright Entries, Third Series** Library of Congress. Copyright Office, 1950 *Institutions of Higher Education in Denmark* Alina Marie Lindegren, David Segel, Fred James Kelly, James Frederick Rogers, John Hamilton McNeely, Maris Marion Proffitt, Severin Kazimierz Turowski, Walter Herbert Gaumnitz, Ella Burgess Ratcliffe, 1934 *Standard Setting in Education* Sigrid Blömeke, Jan-Eric Gustafsson, 2017-02-27 This book summarizes the international evidence on methodological issues in standard setting in education By critically discussing the standard setting practices implemented in the Nordic countries and by presenting new methodological approaches it offers fresh perspectives on the current research Standard setting targets crucial societal objectives by defining educational benchmarks at different achievement levels and provides feedback to policy makers schools and teachers about the strengths and weaknesses of a school system Given that the consequences of standard setting can be dramatic the quality of standard setting is a prime concern If it fails repercussions can be expected in terms of arbitrary evaluations of educational policy wrong turns in school or teacher development or misplacement of individual students Standard setting therefore needs to be accurate reliable valid useful and defensible However specific evidence on the benefits and limits of different approaches to standard setting is rare and scattered and there is a particular lack with respect to standard setting in the Nordic countries where the number of national tests is increasing and there are concerns about the time and effort spent on testing at schools without feedback being provided Addressing this gap the book offers a discussion on standard setting by respected experts as well as profound and innovative insights into fundamental aspects of standard setting including conclusions for future methodological and policy related research Intelligent Tutoring Systems Barry P. Goettl, Henry M. Halff, Carol L. Redfield, Valerie J. Shute, 2003-06-29 The first International Conference on Intelligent Tutoring Systems ITS was held ten years ago in Montreal ITS 88 It was so well received by the

international community that the organizers decided to do it again in Montreal four years later in 1992 and then again in 1996 ITS 98 differs from the previous ones in that this is the first time the conference has been held outside of Montreal and it's only been two years not four since the last one. One interesting aspect of the ITS conferences is that they are not explicitly bound to some organization e.g. IEEE or AACE. Rather the founder of these conferences, Claude Frasson, started them as a means to congregate researchers actively involved in the ITS field and provide a forum for presentation and debate of the most currently challenging issues. Thus the unifying theme is science. This year's hot topics differ from those in the earlier ITS conferences as they reflect ever-changing trends in ITS research. A few of the issues being examined at ITS 98 include Web-based tutoring systems, deploying ITS in the real world, tutoring and authoring tools, architectures and knowledge structure and representation.
