Principles of Radical CV Phonology van der Hulst Harry van der Hulst,2020-07-06 Harry van der Hulst s model of Radical CV Phonology has roots in the framework of Dependency Phonology but proposes a rather different geometry which reduces the set of unary elements to just two C and V The model explains the phonological distinctions that function contrastively in the world s languages rather than presenting it as a random list Van der Hulst shows how this model accounts for a number of central claims about markedness and minimal specification He explains how the representational system accounts for phonological rules and shows how this theory can be applied to sign language structure Through comparison to other models he also provides insight into current theories of segmental structure commonly used feature systems as well as recurrent controversies
