Advanced Calculus

An authorised reissue of the long out of print classic textbook, Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.

Mathematics for Machine Learning

Distills key concepts from linear algebra, geometry, matrices, calculus, optimization, probability and statistics that are used in machine learning.

New General Mathematics for Junior Secondary Schools

This well-established series, the most popular in Nigeria, has been fully revised to reflect recent developments in mathematics education at junior secondary level and the views of the many users of the books. It has especially been revised to fully cover the requirements of the new NERDC Universal Basic Education Curriculum.

Partial Differential Equations

Our understanding of the fundamental processes of the natural world is based to a large extent on partial differential equations (PDEs). The second edition of Partial Differential Equations provides an introduction to the basic properties of PDEs and the ideas and techniques that have proven useful in analyzing them. It provides the student a broad perspective on the subject, illustrates the incredibly rich variety of phenomena encompassed by it, and imparts a working knowledge of the most important techniques of analysis of the solutions of the equations. In this book mathematical jargon is minimized. Our focus is on the three most classical PDEs: the wave, heat and Laplace equations. Advanced concepts are introduced frequently but with the least possible technicalities. The book is flexibly designed for juniors, seniors or beginning graduate students in science, engineering or mathematics.

The Pearson Guide to Quantitative Aptitude for the CAT , *Real-Time Student Assessment* Peggy L. Maki, 2023-07-03

This book challenges institutions and their programs to prioritize the use of chronological assessment results to benefit enrolled students in comparison with the more common practice of prolonged assessment cycles that generally benefit future students. Peggy Maki advocates for real time assessment processes to identify patterns of underperformance and obstacles that require timely interventions for enrolled students to succeed. In tandem with the sets of educational practices and policies that many institutions have now undertaken to close achievement and graduation rates across our diverse student demographics such as developing clear degree pathways, she calls on all higher education providers if they are to remain relevant and meet their social purpose in our complex world to urgently recalibrate their assessment processes to focus on currently enrolled students' progress towards achieving a high quality degree regardless of when they matriculate or re-enter higher education. She demonstrates that we already have sufficient examples and evidence to implement real time assessment of students as they progress through their studies. She draws on the practices of specialized accredited programs such as those in the professions that assess in real time on the experiences of institutions that have adopted competency based education and on the affordances of technologies that now provide faculty and students with up to the minute diagnostics. She identifies the six principles necessary to implement a real time assessment process illustrated by case studies of how campuses have operationalized them to advance students' equitable progress towards achieving a high quality degree and demonstrates the benefits of real time assessment compared to more future oriented processes among which is engaging students in reflecting on their own progress along their degree pathways. She advocates for the use of well documented national outcomes based frameworks such as Liberal Education and America's Promise LEAP, its aligned Valid Assessment of Learning in Undergraduate Education scoring rubrics VALUE, the Degree Qualifications Profile and discipline based outcomes assessments to ensure high quality degrees that meet well defined standards and criteria. She also identifies how data systems and technological developments help to monitor closely and respond in time to students' patterns of underperformance. The book is an urgent call for higher education to achieve the values of equity, transparency and quality; it espouses and ensures that all students graduate in a timely fashion with the competencies they need to be active and productive citizens.

Comprising a selection of expository and research papers, *Harmonic Analysis and Integral Geometry* grew from presentations offered at the July 1998 Summer University of Safi, Morocco, an annual advanced research school and congress. This lively and very successful event drew the attendance of many top researchers who offered both individual lectures.

testing programs As test fairness needs to be addressed throughout the whole process of test development experts from state admission and licensure tests will address test fairness challenges in the new generation assessment The book chapters clarify misconceptions of test fairness including the use of admission test results in cohort comparison the use of international assessment results in trend evaluation whether standardization and fairness necessarily mean uniformity when test takers have different cultural backgrounds and whether standardization can insure fairness More technically chapters also address issues related to how compromised items and test fairness are related to classification decisions how accessibility in item development and accommodation could be mingled with technology how to assess special populations with dyslexia using Blinder Oaxaca Decomposition for differential item functioning detection and differential feature functioning in automated scoring Overall this book addresses test fairness issues in state assessment college admission testing international assessment and licensure tests Fairness is discussed in the context of culture and special populations Further fairness related to performance assessment and automated scoring is a focus as well This book provides a very good source of information related to test fairness issues in test development in the new generation of assessment where technology is highly involved *Essentials of KTEA-3 and WIAT-III Assessment* Kristina C.
