Genealogical is gathering or creating a tree that depicts a family history or the transmission of a specific trait. They have been increasingly in vogue and have become important tools in identifying patterns of inheritance of specific traits. Pedigrees can depict inheritance of specific characteristics without involving a complex debate on how phenotypic values relate to variation and genetically determined structure in our or basic population. They are also useful tools for studying the transmission of pathogenic mutations in a family. Pedigrees are examples of related family members.
