Adams, Evan C. Johnson, 2020-04-16 The purpose of this Special Issue *Water Intake Body Water Regulation and Health* is to present novel reviews and experimental data regarding hydration physiology and its implication in overall health Water has previously been dubbed the forgotten nutrient due to humans and animals ability to subsist seemingly unchanged across a wide range of daily water intakes However with the introduction of stressors such as exercise diseased states and or chronic high or low water intake the homeostatic signals related to body water regulation can influence organ and whole body health This Special Issue will discuss water intake the scientific rationale surrounding the U S and European water intake guidelines homeostatic mechanisms diseases related to dysfunction of water regulation and differences in the volume and the vehicle in which the water is contained i e plain water versus mixed beverages on water intake during and following exercise The aim is to continue discussion surrounding water the previously forgotten nutrient

and highlight the importance of water in daily life *Biochemistry for Sport and Exercise Metabolism* Donald MacLaren, James Morton, 2011-12-12 How do our muscles produce energy for exercise and what are the underlying biochemical principles involved These are questions that students need to be able to answer when studying for a number of sport related degrees This can prove to be a difficult task for those with a relatively limited scientific background Biochemistry for Sport and Exercise Metabolism addresses this problem by placing the primary emphasis on sport and describing the relevant biochemistry within this context The book opens with some basic information on the subject including an overview of energy metabolism some key aspects of skeletal muscle structure and function and some simple biochemical concepts It continues by looking at the three macromolecules which provide energy and structure to skeletal muscle carbohydrates lipids and protein The last section moves beyond biochemistry to examine key aspects of metabolism the regulation of energy production and storage Beginning with a chapter on basic principles of regulation of metabolism it continues by exploring how metabolism is influenced during high intensity prolonged and intermittent exercise by intensity duration and nutrition Key Features A clearly written well presented introduction to the biochemistry of muscle metabolism Focuses on sport to describe the relevant biochemistry within this context In full colour throughout it includes numerous illustrations together with learning objectives and key points to reinforce learning Biochemistry for Sport and Exercise Metabolism will prove invaluable to students across a range of sport related courses who need to get to grips with how exercise mode intensity duration training status and nutritional status can all affect the regulation of energy producing pathways and more important apply this understanding to develop training and nutrition programmes to maximise athletic performance *Techniques to Measure Food Safety and Quality* Mohidus Samad Khan, Mohammad Shafiur Rahman, 2021-09-22 This book addresses the basic understanding of food contaminants and their sources followed by the techniques to measure food safety and quality It is divided into four parts Part A sources of contaminants in foods their associated health risks and integrated management and alternative options to minimize contaminants Part B Technological assessment of conventional methods and selected advanced methods for the detection identification and enumeration of microbial contaminants Part C Technological assessment of different chemical measurements techniques and Part D Technological assessment of different instrumental techniques to assess sensory properties of foods Food safety is a growing concern due to the increase in food borne illnesses caused by food adulteration excessive use of pesticides use of chemical preservatives and artificial fruit ripening agents microbial contaminations and improper food handling Chemical contaminants in food could be transferred from environmental or agrochemical sources personal care products and other by products of water disinfects In addition microbial food safety can be threatened due to the presence of many pathogens such as Salmonella Escherichia coli Clostridium botulinum Staphylococcus aureus and Listeria monocytogenes in foods Globally strict regulations are imposed to limit the potential contaminants in foods Development of accurate rapid and inexpensive

approaches to test food contamination and adulteration would be highly valued to ensure global food safety. There are existing processes to ensure safety of food products from chemical and microbial contaminants. Apart from the existing measurement technologies, varieties of new techniques are also being emerged and these could be potential to ensure food safety and quality. In addition to chemical and microbial properties, sensory properties such as texture, mouth feel, flavor and taste are among the most important attributes of food products to ensure their acceptability by consumers. Two approaches are available to evaluate sensory properties of food products namely subjective and objective analyses. The responses are perceived by all five senses: smell, taste, sight, touch and hearing. The approach used in sensory evaluation varies depending on the types of foods and the ultimate goal of the testing. Sensory attributes are the most important quality parameters after ensuring the safety of foods.
