*Brain and Spinal Tumors of Childhood* David A. Walker, Giorgio Perilongo, Roger E. Taylor, Ian F. Pollack, 2020-11-22 This second edition comes at a time of a paradigm shift in understanding of the molecular pathology and neuroscience of brain and spinal tumors of childhood and their mechanisms of growth within the developing brain Excellent collaborative translational networks of researchers are starting to drive change in clinical practise through the need to test many ideas in trials and scientific initiatives This text reflects the growing concern to understand the impact of the tumour and its treatment upon the full functioning of the child s developing brain and to integrate the judgments of the risks of acquiring brain damage with the risk of death and the consequences for the quality of life for those who survive Information on the principles of treatment has been thoroughly updated A chapter also records the extraordinary work done by advocates All medical and allied professionals involved in any aspect of the clinical care of these patients will find this book an invaluable resource

*Improving outcomes in cerebral palsy with early intervention: new translational approaches* Anna Purna Basu, Gavin John Clowry, 2015-03-30 The aim of this Research Topic was to collate articles describing prediction of outcomes of pre and perinatal lesions leading to cerebral palsy basic research in animal models and human subjects and ideas for and trials of interventions in the first two years of life CP arises from insults to the sensorimotor cortex subcortical axon tracts and subplate The aetiology is complex and often multifactorial The outcome is not simply a loss of voluntary control due to disruption of descending pathways but also involves abnormal development of reflex and corticospinal circuitry CP may be viewed as aberrant plasticity in response to a lesion indeed abnormalities in movement are subtle at first but develop subsequently It is misleading to suppose that developmental mechanisms are self reparative The challenge is to understand activitydependent fine tuning of neural circuitry during normal development and to find how to promote desirable plasticity whilst limiting undesirable effects following developmental lesions However before proposing interventions we have to develop our ability to predict the severity of neonatal insults We solicited a variety of articles including long and short

reviews original research and opinion pieces from both basic scientists and clinicians Likewise we as editors have complementary knowledge and experience in this area Anna Basu is an academic pediatric neurologist and Gavin Clowry is a developmental neuroscientist
