

Manatee Life Cycle

The manatee, sometimes known as the sea cow, is a gentle, vegetarian, mammal that lives in the warm waters of the Caribbean, South America, Coastal Florida, and the Gulf of Mexico.

4

ADULTHOOD

Manatees normally live to about 60 years of age. They spend their time eating to maintain weights of up to 3 thousand pounds. They also regularly migrate to stay within water temperatures above 72 degrees Fahrenheit. Temperatures below 68 can be deadly due to their slow metabolism. They commonly live in natural springs, river basins and sometimes near nuclear power plants because of the warm water released by the power plant.

5

OLD AGE

Manatees will reach old age if they are able to avoid predators, both natural and unnatural. Their natural predators are sharks, alligators and crocodiles. Unnatural predators include boat propellers and fishing nets.

1

MATING

Female manatees reach sexual maturity after the age of 3. They mate with males over the age of 6, normally from a group of manatee bulls that follow them around. They only mate every 3 to 5 years unless they lose their calf in the first year, in which case they mate the next year. Gestation is about 1 year.

2

BIRTH

A newborn calf can weigh 60 to 70 pounds and be 3 to 4 feet in length. The calf is delivered either tail first or head first and begins swimming and nursing immediately.

3

NURSING

The mother-child bond lasts about 2 years during which the calf nurses. After the first year the calf begins supplementing its mother's milk with sea grass.
