Fujimura, 1996 During the late 1970s and 1980s cancer underwent a remarkable transformation In one short decade what had long been a set of heterogeneous diseases marked by uncontrolled cell growth became a disease of our genes How this happened and what it means is the story Joan Fujimura tells in a rare inside look at the way science works and knowledge is created A dramatic study of a new species of scientific revolution this book combines a detailed ethnography of scientific thought an in depth account of science practiced and produced a history of one branch of science as it entered the limelight and a view of the impact of new genetic technologies on science and society The scientific enterprise that Fujimura unfolds for us is proto oncogene cancer research the study of those segments of DNA now thought to make normal cells cancerous Within this framework she describes the processes of knowledge construction as a social enterprise an endless series of negotiations in which theories material technologies and practices are co constructed incorporated and refashioned Along the way Fujimura addresses long standing questions in the history and philosophy of science culture theory and sociology of science How do scientists create good problems experiments and solutions What are the cultural institutional and material technologies that have to be in place for new truths and new practices to succeed Portraying the development of knowledge as a multidimensional process conducted through multiple cultures institutions actors objects and practices this book disrupts divisions among sociology history anthropology and the philosophy of science technology and medicine      *Genetics Manual* G. P. Redei, 1998 Redei has created an outstanding compendium of genetics Arranged as a dictionary the book is almost an encyclopedic collection of terms concepts The author has managed to define terms with appropriate mixtures of depth detail for the researcher along with clarity useful for the nonexpert Choice 1998      Laboratory Methods in Vesicular and Vectorial Transport Alan Tartakoff, 2012-12-02 Laboratory Methods in Vesicular and Vectorial Transport describes the procedures used to study the mechanisms of vesicular transport along the secretory and endocytic paths including electron microscopy autoradiography and methods associated with cyto and immunocytochemistry genetics and biochemistry It investigates vectorial transport to the cisternal space of the rough endoplasmic reticulum ER as well as protein translocation across the ER strategies for gaining access to the cytoplasm cell free analysis of vesicle fusion the structure of glycoproteins and the use of cell systems for analysis of vesicular traffic Organized into seven parts encompassing 20 chapters this volume begins with an overview of protein topology in the ER and the use of cross linking methods to probe the molecular environment of translocating

polypeptide chains It then discusses the reconstitution of secretory protein translocation from detergent solubilized rough microsomes the use of anti idotype antibodies to characterize protein protein interactions the use of perforated cells to elucidate intracellular membrane transport delivery of macromolecules into cells expressing a viral membrane fusion protein and digitonin permeabilization procedures for studying endosome acidification and function The reader is also introduced to reconstitution of intracellular vesicle fusion in a cell free system after receptor mediated endocytosis immunoisolation using magnetic solid supports endosome and lysosome purification by free flow electrophoresis remodeling of glycoprotein oligosaccharides after endocytosis and replica plating of animal cells This book will interest students researchers geneticists biochemists and cell biologists

**IgA Nephropathy** A. R. Clarkson, Andrew J. Woodroffe, 1995 A Laboratory Guide to In Vitro Studies of Protein-DNA Interactions Jost, Saluz, 2013-03-13 A Safety Considerations Many techniques described here involve a number of hazards such as high electrical current and voltage radioactivity and highly toxic chemicals It is absolutely essential that the instructions of equipment manufacturers be followed and that particular attention be paid to the local and federal safety regulations B Introduction The expression of prokaryotic and eukaryotic genes has been shown most often to be regulated at the level of mRNA synthesis Thanks to the rapid development of methods for dissecting DNA sequences cis acting regulatory elements such as promoters and enhancers have been recognised More recently the widely expressed intuition that discrete sequences within these elements constitute binding sites for sequence specific binding proteins has been confirmed especially through the use of footprinting assays for examples Galas and Schmitz 1978 This and similar assays have already resulted in the recognition isolation and analysis of DNA binding proteins for several genes Excellent reviews exist of the structural studies on these transcription regulatory proteins and related DNA elements for example Glover 1989 and Johnson and McKnight 1989 to which the reader is referred for detailed information To set the scene for applications of the techniques described in this volume only the barest outline of previous studies is presented here Protein DNA interactions are dependent on very specific tertiary configurations of the binding protein which allow the closest contact with the DNA helix
