processes using a mathematical approach Environmental Systems Analysis with MATLAB combines environmental science
concepts and system theory with numerical techniques to provide a better understanding of how our environment works The
book focuses on building mathematical models of environmental systems and using these models to analyze their behaviors
Designed with the environmental professional in mind it offers a practical introduction to developing the skills required for
managing environmental modeling and data handling The book follows a logical sequence from the basic steps of model
building and data analysis to implementing these concepts into working computer codes and then on to assessing their
results It describes data processing rarely considered in environmental analysis outlines the tools needed to successfully
analyze data and develop models and moves on to real world problems The author illustrates in the first four chapters the
methodological aspects of environmental systems analysis and in subsequent chapters applies them to specific environmental
concerns The accompanying software bundle is freely downloadable from the book web site It follows the chapters sequence
and provides a hands on experience allowing the reader to reproduce the figures in the text and experiment by varying the
