ApexComponent

Represents a Visualforce component.

For more information, see “Visualforce” in the Salesforce online help. This type extends the [MetadataWithContent](#) metadata type and inherits its content and fullName fields.

Declarative Metadata File Suffix and Directory Location

The file suffix is `.component` for the page file. The accompanying metadata file is named `ComponentName-meta.xml`.

Visualforce components are stored in the `components` folder in the corresponding package directory.

Version

Visualforce components are available in API version 12.0 and later.

Fields

This metadata type contains the following fields:

Field Name	Field Type	Description
apiVersion	double	The API version for this Visualforce component. Every component has an API version specified at creation. This field is available in API version 16.0 and later.
content	base64Binary	The component content. Base 64-encoded binary data. Prior to making an API call, client applications must encode the binary attachment data as base64. Upon receiving a response, client applications must decode the base64 data to binary. This conversion is usually handled for you by a SOAP client. This field is
