Skeletal Muscle Henning Schmalbruch, 2012-12-06 This volume is intended to cover research in the field of muscle morphology since publication of the previous edition by Haggquist in 1956 The development of new techniques coupled with an intensified interest in muscle has resulted in a vast literature which no single person could review especially within the limitations of one volume When I accepted the flattering offer to write a new edition I quickly abandoned any hope of a comprehensive review Instead I tried to consider within my limits those lines of research which I believe to be important for the understanding of mammalian and ultimately human muscles under normal experimental and pathological conditions It would be naive to suggest that muscle can be adequately described in purely morphological aspects I would characterize the results of my effort as muscle as seen with the eyes of a morphologist It gives me pleasure to acknowledge the help of several colleagues who read and commented on drafts of individual chapters Dr Brenda Eisenberg Chicago Dr Else Nygaard Copenhagen Dr Stefano Schiaffino Padova Dr Michael Sjostrom Umea Dr Lars Erik Thornell Umea None of these individuals can be held responsible for any error or obscurity that persists Indeed without their assistance there would have been more I also thank those colleagues who allowed me to include their published and unpublished material their names and also those of the publishers who kindly granted copyright permission are given in the individual figure captions

Milk Proteins C.A. Barth, E. Schlimme, 2012-12-06 This book reviews the state of knowledge and progress of research on food proteins and in particular milk proteins Its basis is the Symposium on Milk Proteins that was held at the Federal Dairy Research Centre in Kiel FRG in June 1988 Scientists from around the world attended and addressed pure as well as applied fields of protein research and technology This book is divided into five sections each adapted from the symposium's invited lectures short communications and poster presentations New criteria for the biological value of dietary proteins and their relationships are considered according to Milk Proteins and Nitrogen Equilibrium Milk Proteins and Ligands Milk Proteins Structural and Genetic Aspects Milk Proteins Technological and Functional Aspects Milk Proteins and Clinical Nutrition Generally different dietary proteins are classified according to their biological value i.e. their capacity to cause different retention of nitrogen in

the body But we think there are other intriguing leads worth studying that may help to identify which dietary proteins are best recommended for specific dietary situations or clinical conditions In addition we have taken into consideration new fields such as attempts to determine the three dimensional structure of proteins using two dimensional NMR spectroscopy and the application of genetic engineering to the lactating cell In other words we are on the way to the transgenic cow with customized milk constituents and composition
