Educating Tomorrow's Engineers Great Britain: Parliament: House of Commons: Science and Technology Committee, 2013-02-08 In the UK we teach young people to become computer users and consumers rather than programmers and software engineers This is creating a chronic skills gap in ICT We need around 82 000 engineers and technicians just to deal with retirements up to 2016 and 830 000 SET professionals by 2020 On the plus side the Government's proposal to

include computer science as a fourth science option to count towards the EBac is welcomed The Committee also welcomes the EBac s focus on attainment of mathematics and science GCSEs but is concerned that subjects such as Design and Technology D T might be marginalised A Technical Baccalaureate TechBac is being designed but if it is to be a success schools should be incentivised to focus on the TechBac by making it equivalent to the EBac Reforms to vocational education following the Wolf Review meant that Level 2 of the Engineering Diploma a qualification highly regarded would count as equivalent to one GCSE despite requiring curriculum time and effort equivalent to several GCSEs The Engineering Diploma however is currently being redesigned as four separate qualifications The Committee also expressed concerns over the Department for Education s DfE lack of clarity on its research budget and use of evidence in decision making The DfE needs to place greater focus on gathering evidence before changes to qualifications are made and must leave sufficient time for evidence to be gathered on the effectiveness of policies before introducing further change The possibility of gathering evidence from randomised controlled trials RCTs should be seriously considered

Physical Separation and Enrichment

Saeed Farrokhpay,2020-04-01 This book includes 12 papers from around the world on topics related to physical separation and enrichment in mineral processing Physical separation is commonly used in the mineral industry to separate valuable minerals from gangues using differences in their physical properties Physical separation methods have several advantages over other mineral processing techniques due to their high efficiency low capital and operating costs no additional chemicals required and consequently lower environmental hazard They can be applied to the ores from mines or tailings or in the recycling stage for scavenging the desired elements

The Robot Factory Joseph Ganem, 2018-08-27 This book exposes a disturbing misuse of the scientific method to advance policies and agendas that are in fact detrimental to both science and education The author a physics professor examines two related trends in education the practice of data driven reform and the disparaging of the traditional liberal arts in favor of programs with a heavy emphasis on science and technology Many of the reforms being foisted on educators have more in common with pseudo science than real science The reduction of education to a commodity and the shilling of science as a means to enhance corporate profits lead to an impoverished and stunted understanding of science in particular and of education in general How is it possible for schools with all students learning at grade level to be rated as failing teachers to be rated as ineffective after all their students meet their learning outcomes rising grade school math standards to result in more college students needing remedial math politicians to disparage scientists and their results but argue that more students should study science These bizarre outcomes have happened and are the result of an education system that misuses and misrepresents math and science in the classroom and in crafting education policies This book exposes the flawed and fallacious thinking that is damaging education at all levels throughout the United States and makes a compelling case for rethinking the standardized optimized and quantified approaches in vogue in education today to accommodate the different needs of individual teachers and students

Ultrasound in Food Processing Mar Villamiel, José V. García-Pérez, Antonia Montilla, Juan A. Carcel, Jose Benedito, 2017-04-25 Part I Fundamentals of ultrasound This part will cover the main basic principles of ultrasound generation and propagation and those phenomena related to low and high intensity ultrasound applications The mechanisms involved in food analysis and process monitoring

and in food process intensification will be shown

Part II Low intensity ultrasound applications

Low intensity ultrasound applications have been used for non destructive food analysis as well as for process monitoring Ultrasonic techniques based on velocity attenuation or frequency spectrum analysis may be considered as rapid simple portable and suitable for on line measurements Although industrial applications of low intensity ultrasound such as meat carcass evaluation have been used in the food industry for decades this section will cover the most novel applications which could be considered as highly relevant for future application in the food industry Chapters addressing this issue will be divided into three subsections

- 1 food control
- 2 process monitoring
- 3 new trends

Part III High intensity ultrasound applications

High intensity ultrasound application constitutes a way to intensify many food processes However the efficient generation and application of ultrasound is essential to achieving a successful effect This part of the book will begin with a chapter dealing with the importance of the design of efficient ultrasonic application systems The medium is essential to achieve efficient transmission and for that reason the particular challenges of applying ultrasound in different media will be addressed The next part of this section constitutes an up to date vision of the use of high intensity ultrasound in food processes The chapters will be divided into four sections according to the medium in which the ultrasound vibration is transmitted from the transducers to the product being treated Thus solid liquid supercritical and gas media have been used for ultrasound propagation Previous books addressing ultrasonic applications in food processing have been based on the process itself so chapters have been divided in mass and heat transport microbial inactivation etc This new book will propose a revolutionary overview of ultrasonic applications based on in the authors opinion the most relevant factor affecting the efficiency of ultrasound applications the medium in which ultrasound is propagated Depending on the medium ultrasonic phenomena can be completely different but it also affects the complexity of the ultrasonic generation propagation and application In addition the effect of high intensity ultrasound on major components of food such as proteins carbohydrates and lipids will be also covered since this type of information has not been deeply studied in previous books Other aspects related to the challenges of food industry to incorporate ultrasound devices will be also considered This point is also very important since in the last few years researchers have made huge efforts to integrate fully automated and efficient ultrasound systems to the food production lines but in some cases it was not satisfactory In this sense it is necessary to identify and review the main related problems to efficiently produce and transmit ultrasound scale up reduce cost save energy and guarantee the production of safe healthy and high added value foods

Enjoying the Track of Term: An Emotional Symphony within **Grade 1physical Science September 2014**

In a global eaten by displays and the ceaseless chatter of quick communication, the melodic elegance and mental symphony developed by the published term usually fade in to the back ground, eclipsed by the constant sound and disruptions that permeate our lives.
